Fund Summary

Investment Objective

The Saba Closed-End Funds ETF (the “Fund”) seeks to provide capital appreciation and dividend income.

Fees and Expenses

This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund (“Shares”). This table and the Example below do not include the brokerage commissions that investors may pay on their purchases and sales of Shares.

Annual Fund Operating Expenses <i>(expenses that you pay each year as a percentage of the value of your investment)</i>	
Management Fee	1.10%
Distribution and Service (12b-1) Fees	0.00%
Other Expenses ¹	0.12%
Acquired Fund Fees and Expenses	1.40%
Total Annual Fund Operating Expenses ²	2.62%

¹ Restated to reflect current fees.

² The Total Annual Fund Operating Expenses in this fee table may not correlate to the expense ratios in the Fund’s financial highlights and financial statements because the financial highlights and financial statements reflect only the operating expenses of the Fund and do not include Acquired Fund Fees and Expenses, which are fees and expenses incurred indirectly by the Fund through its investments in certain underlying investment companies.

Example

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds.

The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then sell all of your Shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund’s operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions your cost would be:

1 Year	3 Years	5 Years	10 Years
\$265	\$814	\$1,390	\$2,954

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the example, affect the Fund’s performance. For the fiscal period March 20, 2017

(commencement of operations) through November 30, 2017, the Fund's portfolio turnover rate was 83% of the average value of its portfolio.

Principal Investment Strategies

The Fund is an actively managed exchange-traded fund ("ETF") that seeks to achieve its investment objective by normally investing at least 80% of its net assets, plus the amount of any borrowings for investment purposes, in securities issued by closed-end funds (the "Underlying Funds"). The Fund expects to invest in Underlying Funds operated by a diversified group of closed-end fund managers ("Underlying Fund Managers"). The Fund may invest in Underlying Funds that are domiciled outside of the U.S. or whose securities are traded on a non-U.S. exchange. The Fund's sub-adviser, Saba Capital Management, L.P. (the "Sub-Adviser"), uses an investment process that combines fundamental analysis, quantitative analysis and proprietary screening tools. In seeking to maximize value, the Fund may invest in Underlying Funds that are, or the Sub-Adviser believes may become, the subject of an activist campaign by a shareholder, such as a proxy contest, whose aim is to eliminate or reduce the discount to the Underlying Fund's net asset value. Such activism may be initiated by the Sub-Adviser or by third parties.

The Fund normally invests in Underlying Funds that primarily pursue high income opportunities, including Underlying Funds that invest in dividend and other income-producing securities and Underlying Funds that invest in high yield or non-investment grade securities (commonly referred to as "junk bonds"). The Underlying Funds will have the flexibility to invest in a broad range of securities. The Underlying Funds may invest in securities with a range of maturities from short- to long-term. Substantially all of the Underlying Funds' assets may be invested in lower-rated securities, which may include securities having the lowest rating for non-subordinated debt instruments (i.e., rated C by Moody's Investors Service or CCC+ or lower by Standard & Poor's Ratings Services and Fitch Ratings) and unrated securities of equivalent investment quality. The Underlying Funds may invest in equity securities, municipal securities, investment grade securities, and unrated securities. The Underlying Funds also may invest in foreign and emerging markets securities (including through depositary receipts or other securities convertible into securities of foreign issuers), mortgage-related and other asset-backed securities, real estate investment trusts ("REITs"), loan participations, inflation-protected securities, structured securities, variable, floating, and inverse floating rate instruments and preferred stock, and may use other investment techniques, including investments in derivative instruments. The Underlying Funds may also make short sales of securities or maintain a short position. Substantially all of the Underlying Funds in which the Fund invests will be exchange-traded.

The Fund may borrow for investment purposes. The Fund may also seek to hedge interest rate risk by engaging in short sales of U.S. Treasury securities and ETFs that seek to track the performance of bond indices or by entering into various types of derivatives transactions, including futures contracts, swaps (including total return swaps) and options (including swaptions).

Principal Risks

As with all funds, a shareholder is subject to the risk that his or her investment could lose money. The principal risks affecting shareholders' investments in the Fund are set forth below. An investment in the Fund is not a bank deposit and is not insured or guaranteed by the FDIC or any government agency. The Fund is subject to the following principal risks, either directly or indirectly through its investments in the Underlying Funds:

Active Management Risk: The Fund is an actively managed ETF. The Fund, therefore, is subject to active management risk. While the Fund's investment program was designed with a view to achieving the Fund's

investment objectives, there can be no assurance or guarantee that the Fund will achieve its stated investment objectives over short- or long-term market cycles.

Anti-Takeover Provision Risk: The organizational documents of certain of the Underlying Funds may include provisions that could limit the ability of other entities or persons to acquire control of the Underlying Fund or to change the composition of its board, which could limit the ability of shareholders to sell their shares at a premium over prevailing market prices by discouraging a third party from seeking to obtain control of the Underlying Fund.

Authorized Participants, Market Makers and Liquidity Providers Concentration Risk: Because the Fund is an ETF, only a limited number of institutional investors (known as “Authorized Participants”) are authorized to purchase and redeem Shares directly from the Fund. In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, Fund shares may trade at a material discount to NAV and possibly face delisting: (i) Authorized Participants exit the business or otherwise become unable to process creation and/or redemption orders and no other Authorized Participants step forward to perform these services, or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.

Convertible Securities Risk: Convertible securities are bonds, debentures, notes, preferred securities or other securities that may be converted or exchanged (by the holder or the issuer) into shares of the underlying common stock (or cash or securities of equivalent value), either at a stated price or stated rate. Convertible securities have characteristics similar to both fixed income and equity securities. Convertible securities generally are subordinated to other similar but non-convertible securities of the same issuer, although convertible bonds, as corporate debt obligations, enjoy seniority in right of payment to all equity securities, and convertible preferred stock is senior to common stock, of the same issuer. Because of the subordination feature, however, convertible securities typically are considered to be lower quality than similar non-convertible securities.

Counterparty Risk: To the extent that the Fund or an Underlying Fund engages in derivative transactions, it will be subject to credit risk with respect to the counterparties. The Fund or the Underlying Fund may obtain only a limited or no recovery or may experience significant delays in obtaining recovery under derivative contracts if a counterparty experiences financial difficulties and becomes bankrupt or otherwise fails to perform its obligations under a derivative contract.

Credit Risk: Issuers or guarantors of debt instruments or the counterparty to a derivatives contract, repurchase agreement or loan of portfolio securities may be unable or unwilling to make timely interest and/or principal payments or to otherwise honor its obligations. Debt instruments are subject to varying degrees of credit risk, which may be reflected in credit ratings. There is the chance that any of an Underlying Fund’s portfolio holdings will have its credit ratings downgraded or will default (fail to make scheduled interest or principal payments), potentially reducing the Underlying Fund’s income level and share price.

Currency Risk: The Fund or an Underlying Fund may invest in non-U.S. dollar denominated securities of foreign issuers. Where a fund’s NAV is determined in U.S. dollars and the fund invests in non-U.S. dollar denominated securities, the fund’s NAV could decline if the currency of the non-U.S. market in which the fund invests depreciates against the U.S. dollar, even if the value of the fund’s holdings, measured in the foreign currency, increases. Among the factors that may affect currency values are trade balances, the level

of short-term interest rates, differences in relative values of similar assets in different currencies, long-term opportunities for investment and capital appreciation and political developments.

Deflation Risk: Prices throughout the economy may decline over time, which may have an adverse effect on the market valuation of companies, their assets and revenues. In addition, deflation may have an adverse effect on the creditworthiness of issuers and may make issuer default more likely, which may result in a decline in the value of an Underlying Fund's portfolio.

Derivatives Risk: A derivative instrument often has risks similar to its underlying instrument and may have additional risks, including imperfect correlation between the value of the derivative and the underlying instrument, risks of default by the counterparty to certain derivative transactions, magnification of losses incurred due to changes in the market value of the securities, instruments, indices or interest rates to which the derivative relates, and risks that the derivative instruments may not be liquid. In December 2015, the SEC proposed a new rule to regulate the use of derivatives by registered investment companies, such as the Fund. Whether and when this proposed rule will be adopted and its potential effects on the Fund are unclear as of the date of this Prospectus.

Covered Call Option Writing Risk: The Fund may invest in Underlying Funds that engage in a strategy known as "covered call option writing," which is designed to produce income from option premiums and offset a portion of a market decline in the underlying security. The writer (seller) of a covered call option forgoes, during the option's life, the opportunity to profit from increases in the market value of the security covering the call option above the sum of the premium and the strike price of the call, but has retained the risk of loss should the price of the underlying security decline. The writer of an option has no control over the time when it may be required to fulfill its obligation as a writer of the option. Once an option writer has received an exercise notice, it cannot effect a closing purchase transaction in order to terminate its obligation under the option and must deliver the underlying security at the exercise price.

Futures Contracts Risk. Futures contracts are typically exchange-traded contracts that call for the future delivery of an asset at a certain price and date, or cash settlement of the terms of the contract. Risks of futures contracts may be caused by an imperfect correlation between movements in the price of the instruments and the price of the underlying securities. In addition, there is the risk that the purchaser of a futures contract may not be able to enter into a closing transaction because of an illiquid market. Exchanges can limit the number of positions that can be held or controlled by a fund or its investment adviser, thus limiting the ability to implement the fund's strategies. Futures markets are highly volatile and the use of futures may increase the volatility of a fund's net asset value. Futures are also subject to leverage risks and to liquidity risk.

Options Risk. Options give the holder of the option the right to buy (or to sell) a position in a security or in a contract to the writer of the option, at a certain price. They are subject to correlation risk because there may be an imperfect correlation between the options and the securities markets that cause a given transaction to fail to achieve its objectives. The successful use of options depends on the Sub-Adviser's ability to correctly predict future price fluctuations and the degree of correlation between the options and securities markets. Exchanges can limit the number of positions that can be held or controlled by the Fund or the Sub-Adviser, thus limiting the ability to implement the Fund's strategies. Options are also particularly subject to leverage risk and can be subject to liquidity risk.

Options on Swaps. An option on a swap agreement, or a "swaption," is a contract that gives a counterparty the right (but not the obligation) to enter into a new swap agreement or to shorten, extend, cancel or otherwise modify an existing swap agreement, at some designated future time on

specified terms. In return, the purchaser pays a “premium” to the seller of the contract. The seller of the contract receives the premium and bears the risk of unfavorable changes on the underlying swap. The Fund may write (sell) and purchase put and call swaptions. The Fund may also enter into swaptions on either an asset-based or liability-based basis, depending on whether the Fund is hedging its assets or its liabilities. The Fund may write (sell) and purchase put and call swaptions to the same extent it may make use of standard options on securities or other instruments. Swaptions are generally subject to the same risks involved in the Fund’s use of options.

Swap Agreement Risk. Swap agreements are generally traded in over-the-counter (“OTC”) markets and have only recently become subject to regulation by the U.S. Commodity Futures Trading Commission (“CFTC”). CFTC rules, however, do not cover all types of swap agreements. Investors, therefore, may not receive the protection of CFTC regulation or the statutory scheme of the Commodity Exchange Act in connection with the Fund’s swap agreements. The lack of regulation in these markets could expose investors to significant losses under certain circumstances, including in the event of trading abuses or financial failure by participants.

Total Return Swap Risk. A total return swap is a contract in which one party agrees to make periodic payments to another party based on the change in market value of the assets underlying the contract, which may include a specified security, basket of securities, or securities indices during the specified period, in return for periodic payments based on a fixed or variable interest rate or the total return from other underlying assets. Total return swap agreements may be used to obtain exposure to a security or market without owning or taking physical custody of such security or investing directly in such market. Total return swap agreements may effectively add leverage to a fund’s portfolio because, in addition to its total net assets, the fund would be subject to investment exposure on the notional amount of the swap. The primary risks associated with total returns swaps are credit risks (if the counterparty fails to meet its obligations) and market risk (if there is no liquid market for the agreement or unfavorable changes occur to the underlying asset).

Dividend Risk: An issuer of a security may be unwilling or unable to pay income on a security. Common stocks do not assure dividend payments. Common stockholders have a right to receive dividends only after the company has provided for payment of its creditors, bondholders and preferred stockholders. Dividends are paid only when declared by an issuer’s board of directors, and the amount of any dividend may vary over time.

Equity Securities Risk: Common stock holds the lowest priority in the capital structure of a company, and therefore takes the largest share of the company’s risk and its accompanying volatility. An adverse event, such as an unfavorable earnings report, may depress the value of a particular common stock. Also, prices of common stocks are sensitive to general market movements.

Foreign and Emerging Markets Securities Risk: Fluctuations in the value of the U.S. dollar relative to the values of other currencies may adversely affect investments in foreign and emerging market securities. Foreign and emerging market securities may have relatively low market liquidity, decreased publicly available information about issuers, and inconsistent and potentially less stringent accounting, auditing and financial reporting requirements and standards of practice comparable to those applicable to domestic issuers. Foreign and emerging market securities may be subject to the risks of expropriation, nationalization or other adverse political or economic developments and the difficulty of enforcing obligations in other countries. Investments in foreign and emerging market securities also may be subject to dividend withholding or confiscatory taxes, currency blockage and/or transfer restrictions. Emerging markets may be subject to greater market volatility, lower trading volume, political and economic instability, uncertainty regarding the existence of trading markets and more governmental limitations on foreign investment than more developed markets. In addition, securities in emerging markets may be subject to greater price

fluctuations than securities in more developed markets. The Fund or an Underlying Fund's investment in securities of foreign companies may be in the form of depositary receipts or other securities convertible into securities of foreign issuers. Depositary receipts generally must be sponsored, but may be unsponsored. Sponsored depositary receipts are established jointly by a depositary and the underlying issuer, whereas unsponsored depositary receipts may be established by a depositary without participation by the underlying issuer. Holders of an unsponsored depositary receipt generally bear all the costs associated with establishing the unsponsored depositary receipt. In addition, the issuers of the securities underlying unsponsored depositary receipts are not obligated to disclose material information in the United States and, therefore, there may be less information available regarding such issuers and there may not be a correlation between such information and the market value of the depositary receipts. The regulatory framework pursuant to which foreign closed-end funds operate may not provide the same protections afforded by U.S. federal securities laws. In addition, where all or a portion of an ETF's portfolio holdings trade in markets that are closed when the market for the ETF is open, there may be valuation differences that could lead to differences between the ETF's market price and the value of the ETF's portfolio holdings.

Fund Distributions Risk: The Fund seeks to make cash distributions once per month throughout a calendar year based on a rate determined at the beginning of the year. Because these distributions will be made from Fund assets and shareholders are generally not expected to reinvest such distributions in additional Fund shares, the Fund's monthly cash distributions will reduce the amount of assets available for investment by the Fund. It is possible for the Fund to suffer substantial investment losses and simultaneously experience additional asset reductions as a result of its distributions to shareholders under this distribution policy. Moreover, even if the Fund's capital grows over short, intermediate, or long periods of time, it is possible that such growth will be insufficient to enable the Fund to maintain the amount of its cash distributions without returning capital to shareholders. A return of capital is a return of all or part of a shareholder's original investment in the Fund. In general, a return of capital is not immediately taxable to a shareholder. Rather, it reduces a shareholder's cost basis in Fund shares and is not taxable to a shareholder until his or her cost basis has been reduced to zero. The rate and dollar amount of the Fund's monthly income payments could vary substantially from one year to the next, during the course of a year, and over time depending on several factors, including the performance of the financial markets in which the Fund invests, the allocation of Fund assets across different asset classes and investments, the performance of the Fund's investment strategies, and the amount and timing of prior distributions by the Fund. The Fund is not guaranteed to provide a fixed or stable level of cash distributions at any time or over any period of time.

Fund of Funds Risk: Because the Fund is a "fund of funds," its investment performance largely depends on the investment performance of the Underlying Funds in which it invests. An investment in the Fund is subject to the risks associated with the Underlying Funds. The Fund will pay indirectly a proportional share of the fees and expenses of the Underlying Funds in which it invests (referred to herein as "acquired fund fees and expenses"), including their investment advisory and administration fees, in addition to its own fees and expenses. In addition, at times, certain segments of the market represented by constituent Underlying Funds may be out of favor and underperform other segments.

Geographic Investment Risk: To the extent the Fund invests a significant portion of its assets in the securities of companies of a single country or region, it is more likely to be impacted by events or conditions affecting that country or region.

High Yield or Non-Investment Grade Securities Risk: High yield or non-investment grade securities (commonly referred to as "junk bonds") and unrated securities of comparable credit quality are subject to the increased risk of an issuer's inability to meet principal and interest payment obligations and are generally considered to be speculative. These securities may be subject to greater price volatility due to such factors as specific corporate developments, interest rate sensitivity, negative perceptions of the non-investment grade securities markets generally, real or perceived adverse economic and competitive industry

conditions and less secondary market liquidity. If the issuer of non-investment grade securities defaults, an Underlying Fund may incur additional expenses to seek recovery.

Inflation Risk: The value of assets or income from an investment will be worth less in the future as inflation decreases the value of money.

Inflation-Protected Securities Risk: Inflation-protected debt securities may react differently from other types of debt securities and tend to react to changes in “real” interest rates. Real interest rates represent nominal (stated) interest rates reduced by the expected impact of inflation. In general, the price of an inflation-protected debt security can fall when real interest rates rise, and can rise when real interest rates fall. Interest payments on inflation-protected debt securities can be unpredictable and will vary as the principal and/or interest is adjusted for inflation. Also, the inflation index utilized by a particular inflation-protected security may not accurately reflect the true rate of inflation, in which case the market value of the security could be adversely affected.

Interest Rate Risk: Investments in fixed-income securities are subject to the possibility that interest rates could rise sharply, causing the value of shares of an Underlying Fund and its holdings to decline. The risks associated with rising interest rates are heightened given the historically low interest rate environment. Fixed-income securities with longer durations are subject to more volatility than those with shorter durations. The Fund may seek to hedge interest rate risk through the use of short positions in U.S. Treasury securities or in ETFs that seek to track the performance of bond indices, or through the use of derivative instruments, but there can be no guarantee that such strategies will be successful.

Illiquid Securities Risk: Closed-end funds are not limited in their ability to invest in illiquid securities. Securities with reduced liquidity involve greater risk than securities with more liquid markets. Market quotations for securities not traded on national exchanges may vary over time, and if the credit quality of a fixed-income security unexpectedly declines, secondary trading of that security may decline for a period of time. In the event that an Underlying Fund voluntarily or involuntarily liquidates portfolio assets during periods of infrequent trading, it may not receive full value for those assets.

Issuer-Specific Risk: The value of an Underlying Fund may be more volatile than the market as a whole and may perform differently from the value of the market as a whole.

Leverage Risk: Leverage may result from ordinary borrowings, or may be inherent in the structure of certain of the Fund’s investments such as derivatives. If the prices of those investments decrease, or if the cost of borrowing exceeds any increase in the prices of those investments, the NAV of the Fund’s Shares will decrease faster than if the Fund had not used leverage. To repay borrowings, the Fund may have to sell investments at a time and at a price that is unfavorable to the Fund. Interest on borrowings is an expense the Fund would not otherwise incur. Leverage magnifies the potential for gain and the risk of loss. If the Fund uses leverage, there can be no assurance that the Fund’s leverage strategy will be successful. The Underlying Funds in which the Fund may invest may be leveraged. As a result, the Fund may be exposed indirectly to leverage through investment in the Underlying Funds. An investment in securities of Underlying Funds that use leverage may expose the Fund to higher volatility in the market value of such securities and the possibility that the Fund’s long-term returns on such securities (and, indirectly, the long-term returns of the Shares) will be diminished.

Loans Risk: Loans are subject to the credit risk of nonpayment of principal or interest. Economic downturns or increases in interest rates may cause an increase in defaults, interest rate risk and liquidity risk. Loans may or may not be collateralized at the time of acquisition, and any collateral may be relatively illiquid or lose all or substantially all of its value subsequent to investment. In the event of bankruptcy of a borrower, an Underlying Fund could experience delays or limitations with respect to its ability to realize the benefits

of any collateral securing a loan. Junior loans, which have a lower place in the borrower's capital structure than senior loans and may be unsecured, involve a higher degree of overall risk than senior loans of the same borrower. An Underlying Fund's investments in loans are also subject to prepayment or call risk. Loans may have settlement periods in excess of seven days. Failure to receive sales proceeds on a timely basis may constrain an Underlying Fund's ability to meet its obligations (including obligations to redeeming shareholders).

Management Risk: The Sub-Adviser's proprietary screening and selection process of the Underlying Funds and the Underlying Fund Managers and its use of investment strategies including the use of borrowing and derivatives may not produce the intended results.

Market Risk: The market price of a security or instrument could decline, sometimes rapidly or unpredictably, due to general market conditions that are not specifically related to a particular company, such as real or perceived adverse economic or political conditions throughout the world, changes in the general outlook for corporate earnings, changes in interest or currency rates or adverse investor sentiment generally. The market value of a security may also decline because of factors that affect a particular industry or industries, such as labor shortages or increased production costs and competitive conditions within an industry.

Mortgage-Backed and Asset-Backed Securities Risk: Investments in mortgage- and asset-backed securities are subject to prepayment or call risk, which is the risk that payments from the borrower may be received earlier than expected due to changes in the rate at which the underlying loans are prepaid. Securities may be prepaid at a price less than the original purchase value.

Municipal Securities Risk: Municipal securities are debt obligations issued by states or by political subdivisions or authorities of states. Municipal securities are typically designated as general obligation bonds, which are general obligations of a governmental entity that are backed by the taxing power of such entity, or revenue bonds, which are payable from the income of a specific project or authority and are not supported by the issuer's power to levy taxes. Lower-quality revenue bonds and other credit-sensitive municipal securities carry higher risks of default than general obligation bonds. Litigation, legislation or other political events, local business or economic conditions or the bankruptcy of the issuer could have a significant effect on the ability of an issuer of municipal securities to make payments of principal and/or interest. Political changes and uncertainties in the municipal market related to taxation, legislative changes or the rights of municipal security holders can significantly affect municipal securities. Because many municipal securities are issued to finance similar projects, especially those related to education, health care, transportation and utilities, conditions in those sectors can affect the overall municipal market. In addition, changes in the financial condition of an individual municipal issuer can affect the overall municipal market. If the Internal Revenue Service (the "IRS") determines that an issuer of a municipal security has not complied with applicable tax requirements, interest from the security could become taxable and the security could significantly decline in value.

Operational Risk. The Fund and its service providers may experience disruptions that arise from human error, processing and communications errors, counterparty or third-party errors, technology or systems failures, any of which may have an adverse impact on the Fund.

Preferred Securities Risk: Preferred securities are subordinated to bonds and other debt instruments in a company's capital structure and therefore will be subject to greater credit risk than those debt instruments. In addition, preferred securities are subject to other risks, such as having no or limited voting rights, being

subject to special redemption rights, having distributions deferred or skipped, having limited liquidity, changing tax treatments and possibly being in heavily regulated industries.

Real Estate Investment Trust (“REIT”) Risk: Adverse economic, business or political developments affecting real estate could have a major effect on the value of an Underlying Fund’s investments in REITs. Investing in REITs may subject an Underlying Fund to risks associated with the direct ownership of real estate, such as decreases in real estate values, overbuilding, increased competition and other risks related to local or general economic conditions, increases in operating costs and property taxes, changes in zoning laws, casualty or condemnation losses, possible environmental liabilities, regulatory limitations on rent and fluctuations in rental income. In addition, REITs are subject to the possibility of failing to qualify for the favorable U.S. federal income tax treatment generally available to them under the Internal Revenue Code of 1986, as amended (the “Code”), and failing to maintain exemption from the registration requirements of the Investment Company Act of 1940, as amended (the “1940 Act”). Recently enacted tax legislation commonly referred to as the Tax Cuts and Jobs Act (the “Tax Act”) treats “qualified REIT dividends” (i.e., ordinary REIT dividends other than capital gain dividends and portions of REIT dividends designated as qualified dividend income eligible for capital gain tax rates) as eligible for a 20% deduction by non-corporate taxpayers. This deduction, if allowed in full, equates to a maximum effective tax rate of 29.6% (37% top rate applied to income after 20% deduction). The Tax Act does not contain a provision permitting a regulated investment company, such as the Fund, to pass the special character of this income through to its shareholders. Currently, direct investors in REITs will enjoy the lower rate, but investors in regulated investment companies that invest in such REITs will not. It is uncertain whether future technical corrections or administrative guidance will address this issue to enable the Fund to pass through the special character of “qualified REIT dividends” to shareholders.

Risk of Underlying Fund Market Price Discount from/Premium to Net Asset Value: The shares of the Underlying Funds may trade at a discount or premium to their NAV. Historically, shares of Underlying Funds have frequently traded at a discount to their NAV, which discounts have, on occasion, been substantial and lasted for sustained periods of time. This characteristic is a risk separate and distinct from the risk that an Underlying Fund’s NAV could decrease as a result of investment activities. Whether an investor, such as the Fund, will realize gains or losses upon the sale of shares will depend not on the Underlying Funds’ NAVs, but entirely upon whether the market price of the Underlying Funds’ shares at the time of sale is above or below such investor’s purchase price for shares.

Shareholder Activism Risk: When pursuing an activist campaign with respect to an Underlying Fund, the Sub-Adviser may come into possession of material, non-public information about the Underlying Fund. In these circumstances and until such information becomes publicly available, the Fund may be prevented from transacting in Underlying Fund shares, which may adversely affect the Fund’s performance.

Short Selling Risk: Short selling involves selling securities, which may or may not be owned, and borrowing the same securities for delivery to the purchaser, with an obligation to replace the borrowed securities at a later date. Short selling allows an investor to seek profits from declines in the prices of securities. A short sale creates the risk of a theoretically unlimited loss because the price of the underlying security could theoretically increase without limit and increase the cost of buying those securities to close the short position. There can be no assurance that the securities necessary to close a short position will be available for purchase. Purchasing securities to close out the short position can itself cause the price of the securities to rise further, thereby exacerbating the loss. Short strategies can also be implemented synthetically through various instruments and be used with respect to indices or in the over-the-counter market and with respect to futures and other instruments. There can be no assurance that such market makers will be willing to make such quotes. Short strategies can also be implemented on a leveraged basis. Lastly, even though an Underlying Fund generally secure a "good borrow" of the security sold short at the time of execution, the

lending institution may recall the lent security at any time, thereby forcing such Underlying Fund to purchase the security at the then-prevailing market price, which may be higher.

Structured Instruments Risk: The Underlying Funds may invest in, or have exposure to, various types of structured instruments, including securities that have demand, tender or put features, or interest rate reset features. Structured instruments are a type of derivative instrument and the payment and credit qualities of these instruments derive from the assets embedded in the structure from which they are issued. Structured instruments may behave in ways not anticipated by the Underlying Funds, or they may not receive tax, accounting or regulatory treatment anticipated by the Underlying Funds.

Trading Risk: Although the Fund's Shares are currently listed on the Exchange, there can be no assurance that an active trading market for Shares will develop or be maintained. In stressed market conditions, the market for the Fund's Shares may become less liquid in response to deteriorating liquidity in markets for underlying portfolio holdings, which could lead to differences between the market price of the Fund's shares and the underlying value of the Fund's portfolio holdings. Trading in Fund Shares may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in Shares inadvisable. There may be times when the Fund's Shares trade at a premium or discount to net asset value.

Performance Information

The Fund commenced operations on March 20, 2017 and therefore does not have a full calendar year of performance. Once the Fund has completed a full calendar year of operations, a bar chart and table will be included that will provide some indication of the risks of investing in the Fund by showing the variability of the Fund's return based on net assets and comparing the variability of the Fund's return to a broad measure of market performance.

Investment Advisers

Exchange Traded Concepts, LLC serves as the investment adviser to the Fund. Saba Capital Management, L.P. serves as the sub-adviser to the Fund.

Portfolio Managers

Boaz Weinstein, Founder and Chief Investment Officer of the Sub-Adviser and Pierre Weinstein, Partner and Portfolio Manager of the Sub-Adviser have had primary responsibility for the day-to-day management of the Fund since its inception in 2017.

Purchase and Sale of Fund Shares

The Fund will issue (or redeem) Shares to certain institutional investors (typically market makers or other broker-dealers) only in large blocks of at least 25,000 Shares known as "Creation Units." Creation Unit transactions are typically conducted in exchange for the deposit or delivery of a portfolio of securities closely approximating the holdings of the Fund and/or a specified amount of cash. Individual Shares may only be purchased and sold on a national securities exchange through a broker-dealer. You can purchase and sell individual Shares of the Fund throughout the trading day like any publicly traded security. The Fund's Shares are listed on Cboe BZX Exchange, Inc. (the "Exchange"). The price of the Fund's Shares is based on market price, and because exchange-traded fund shares trade at market prices rather than NAV,

Shares may trade at a price greater than NAV (premium) or less than NAV (discount). **Except when aggregated in Creation Units, the Fund's Shares are not redeemable securities.**

Tax Information

Distributions made by the Fund may be taxable as ordinary income, qualified dividend income, or long-term capital gains, unless you are investing through a tax-advantaged arrangement, such as a 401(k) plan or individual retirement account.

Payments to Broker-Dealers and Other Financial Intermediaries

If you purchase Shares of the Fund through a broker-dealer or other financial intermediary (such as a bank), the Fund and its related companies may pay the intermediary for the sale of Shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's web site for more information.

Additional Principal Investment Strategy Information

The Fund is an actively managed ETF and uses an active investment strategy to seek to meet its investment objective. The Sub-Adviser, subject to the oversight of the Adviser and the Board, has discretion on a daily basis to manage the Fund's portfolio in accordance with the Fund's investment objective and investment policies. The Fund's investment objective is a non-fundamental investment policy and may be changed without shareholder approval. The Fund's policy to invest at least 80% of its net assets, plus the amount of any borrowings for investment purposes, in securities issued by Underlying Funds may be changed without shareholder approval, upon 60 days' notice to shareholders.

The Fund may lend portfolio securities to certain creditworthy borrowers. Securities lending involves exposure to certain risks, including operational risk (i.e., the risk of losses resulting from problems in the settlement and accounting process), "gap" risk (i.e., the risk of a mismatch between the return on cash collateral reinvestments and the fees the Fund has agreed to pay a borrower), and credit, legal, counterparty and market risk. In the event a borrower does not return the Fund's securities as agreed, the Fund may experience losses if the proceeds received from liquidating the collateral do not at least equal the value of the loaned security at the time the collateral is liquidated plus the transaction costs incurred in purchasing replacement securities.

In response to actual or perceived adverse market, economic, political, or other conditions, the Fund may (but will not necessarily), without notice, depart from its principal investment strategies by temporarily investing for defensive purposes. Temporary defensive positions may include, but are not limited to, cash, cash equivalents, U.S. government securities, repurchase agreements collateralized by such securities, money market funds, and high-quality debt investments. If the Fund invests for defensive purposes, it may not achieve its investment objective. In addition, the defensive strategy may not work as intended.

Additional Principal Risk Information

The following section provides additional information regarding certain of the principal risks identified under "Principal Risks" in the Fund's summary along with additional risk information. Risk information is applicable to the Fund unless otherwise noted.

Active Management Risk: As an actively managed ETF, the Fund is subject to active management risk. While the Fund's investment program was designed with a view to achieving the Fund's investment

objectives, there can be no assurance or guarantee that the Fund will achieve its stated investment objectives over short- or long-term market cycles. Various legislative, regulatory, or tax restrictions, policies or developments may affect the success of the Fund's investment program and investment techniques utilized by the Fund.

Anti-Takeover Provision Risk: The organizational documents of certain of the Underlying Funds may include provisions that could limit the ability of other entities or persons to acquire control of the Underlying Fund or to change the composition of its board, which could limit the ability of shareholders to sell their shares at a premium over prevailing market prices by discouraging a third party from seeking to obtain control of the Underlying Fund.

Authorized Participants, Market Makers and Liquidity Providers Concentration Risk: Only an Authorized Participant may engage in creation or redemption transactions directly with the Fund. The Fund has a limited number of financial institutions that may act as Authorized Participants. In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, Fund shares may trade at a material discount to NAV and possibly face delisting: (i) Authorized Participants exit the business or otherwise become unable to process creation and/or redemption orders and no other Authorized Participants step forward to perform these services, or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions. An active trading market for Shares of the Fund may not develop or be maintained, and, particularly during times of market stress, Authorized Participants or market makers may step away from their respective roles in making a market in Shares of the Fund and in executing purchase or redemption orders. This could, in turn, lead to variances between the market price of the Fund's Shares and the value of its underlying securities.

Convertible Securities Risk: Convertible securities are bonds, debentures, notes, preferred securities or other securities that may be converted or exchanged (by the holder or the issuer) into shares of the underlying common stock (or cash or securities of equivalent value), either at a stated price or stated rate. Convertible securities have characteristics similar to both fixed income and equity securities. Convertible securities generally are subordinated to other similar but non-convertible securities of the same issuer, although convertible bonds, as corporate debt obligations, enjoy seniority in right of payment to all equity securities, and convertible preferred stock is senior to common stock, of the same issuer. Because of the subordination feature, however, convertible securities typically are considered to be lower quality than similar non-convertible securities.

The market value of convertible securities tends to decline as interest rates increase and, conversely, tends to increase as interest rates decline. In addition, because of the conversion feature, the market value of convertible securities tends to vary with fluctuations in the market value of the underlying common stock. A unique feature of convertible securities is that as the market price of the underlying common stock declines, convertible securities tend to trade increasingly on a yield basis, and so may not experience market value declines to the same extent as the underlying common stock. When the market price of the underlying common stock increases, the prices of the convertible securities tend to rise as a reflection of the value of the underlying common stock.

Convertible securities provide for a stable stream of income with generally higher yields than common stocks, but there can be no assurance of current income, because the issuers of the convertible securities may default on their obligations. A convertible security, in addition to providing fixed income, offers the potential for capital appreciation through the conversion feature, which enables the holder to benefit from increases in the market price of the underlying common stock. There can be no assurance of capital appreciation, however, because securities prices fluctuate. Convertible securities generally offer lower

interest or dividend yields than non-convertible securities of similar quality because of the potential for capital appreciation.

Counterparty Risk: To the extent that an Underlying Fund engages in derivative transactions, it will be subject to credit risk with respect to the counterparties. The Underlying Fund may obtain only a limited or no recovery or may experience significant delays in obtaining recovery under derivative contracts if a counterparty experiences financial difficulties and becomes bankrupt or otherwise fails to perform its obligations under a derivative contract.

Credit Risk: Issuers or guarantors of debt instruments or the counterparty to a derivatives contract, repurchase agreement or loan of portfolio securities may be unable or unwilling to make timely interest and/or principal payments or to otherwise honor its obligations. Debt instruments are subject to varying degrees of credit risk, which may be reflected in credit ratings. There is the chance that any of an Underlying Fund's portfolio holdings will have its credit ratings downgraded or will default (fail to make scheduled interest or principal payments), potentially reducing the fund's income level and share price.

Currency Risk: The Fund or an Underlying Fund may invest in non-U.S. dollar denominated securities of foreign issuers. Where a fund's NAV is determined in U.S. dollars and the fund invests in non-U.S. dollar denominated securities, the fund's NAV could decline if the currency of the non-U.S. market in which the fund invests depreciates against the U.S. dollar, even if the value of the fund's holdings, measured in the foreign currency, increases. Among the factors that may affect currency values are trade balances, the level of short-term interest rates, differences in relative values of similar assets in different currencies, long-term opportunities for investment and capital appreciation and political developments.

Deflation Risk: Prices throughout the economy may decline over time, which may have an adverse effect on the market valuation of companies, their assets and revenues. In addition, deflation may have an adverse effect on the creditworthiness of issuers and may make issuer default more likely, which may result in a decline in the value of an Underlying Fund's portfolio.

Derivatives Risk: A derivative instrument often has risks similar to its underlying instrument and may have additional risks, including imperfect correlation between the value of the derivative and the underlying instrument, risks of default by the counterparty to certain derivative transactions, magnification of losses incurred due to changes in the market value of the securities, instruments, indices or interest rates to which the derivative relates, and risks that the derivative instruments may not be liquid.

The Underlying Funds may invest in, or enter into, derivatives such as forward contracts, options, futures contracts, options on futures contracts and swap agreements. The Underlying Funds may engage in such derivatives transactions to gain exposure to, for example, certain securities, markets or asset classes, to hedge the Underlying Fund's positions in or exposure to securities, currencies or other instruments, to equitize cash positions in the Underlying Fund's portfolio, or to enhance the Underlying Fund's return. Derivatives may be purchased on established exchanges or through privately negotiated transactions referred to as OTC derivatives. Exchange-traded derivatives generally are guaranteed by the clearing agency which is the issuer or counterparty to such derivatives. Each party to an OTC derivative bears the risk that the counterparty will default. OTC derivatives are less liquid than exchange-traded derivatives since the other party to the transaction may be the only investor with sufficient understanding of the derivative to be interested in bidding for it.

Derivatives can be volatile and involve various types and degrees of risk, depending upon the characteristics of the particular derivative. Derivatives may entail investment exposures that are greater than their cost would suggest, meaning that a small investment in derivatives could have a large potential impact on an Underlying Fund's performance. The market for many derivatives is, or suddenly can become, illiquid.

Changes in liquidity may result in significant, rapid and unpredictable changes in the prices for derivatives. Successful use of derivatives also is subject to the ability of the Underlying Fund's manager to predict correctly movements in the direction of the relevant market and, to the extent the transaction is entered into for hedging purposes, to ascertain the appropriate correlation between the transaction being hedged and the price movements of the derivatives.

The SEC recently proposed a new rule related to the use of derivatives by registered investment companies, such as the Fund. Whether and when this proposed rule will be adopted and its potential effects on the Fund are unclear, although they could be substantial and adverse to the Fund. The regulation of the use of derivatives in the United States is a rapidly changing area of law and is subject to ongoing modification by government, self-regulatory and judicial action.

Covered Call Option Writing Risk: The Fund may invest in Underlying Funds that engage in a strategy known as "covered call option writing," which is designed to produce income from option premiums and offset a portion of a market decline in the underlying security. The writer (seller) of a covered call option forgoes, during the option's life, the opportunity to profit from increases in the market value of the security covering the call option above the sum of the premium and the strike price of the call, but has retained the risk of loss should the price of the underlying security decline. The writer of an option has no control over the time when it may be required to fulfill its obligation as a writer of the option. Once an option writer has received an exercise notice, it cannot effect a closing purchase transaction in order to terminate its obligation under the option and must deliver the underlying security at the exercise price.

To the extent an Underlying Fund writes covered put options, it bears the risk of loss if the value of the underlying stock declines below the exercise price minus the put premium. If the option is exercised, the Underlying Fund could incur a loss if it is required to purchase the stock underlying the put option at a price greater than the market price of the stock at the time of exercise plus the put premium the Underlying Fund received when it wrote the option. While the Underlying Fund's potential gain in writing a covered put option is limited to distributions earned on the liquid assets securing the put option plus the premium received from the purchaser of the put option, the Underlying Fund risks a loss equal to the entire exercise price of the option minus the put premium.

The hours of trading for options on an exchange may not conform to the hours during which the underlying securities are traded. To the extent that the options markets close before the markets for the underlying securities, significant price and rate movements can take place in the underlying markets that cannot be reflected in the options markets. Call options are marked-to-market daily and their value will be affected by changes in the value and dividend rates of the underlying common stocks, an increase in interest rates, changes in the actual or perceived volatility of the stock market and the underlying common stocks and the remaining time to the options' expiration. Additionally, the exercise price of an option may be adjusted downward before the option's expiration as a result of the occurrence of certain corporate events affecting the underlying equity security, such as extraordinary dividends, stock splits, mergers or other extraordinary distributions or events. A reduction in the exercise price of an option would reduce the Underlying Fund's capital appreciation potential on the underlying security.

OTC options differ from exchange-listed options in that they are two-party contracts, with exercise price, premium and other terms negotiated between buyer and seller, and generally do not have as much market liquidity as exchange-listed options. The OTC options written by an Underlying Fund will not be issued, guaranteed or cleared by the Options Clearing Corporation. In addition, the Underlying Fund's ability to terminate the OTC options may be more limited than with exchange-traded options. Banks, broker-dealers or other financial institutions participating in such transaction

may fail to settle a transaction in accordance with the terms of the option as written. In the event of default or insolvency of the counterparty, the Underlying Fund may be unable to liquidate an OTC option position.

The purchaser of an index put option has the right to any depreciation in the value of the index below the exercise price of the option on or before the expiration date. The purchaser of an index call option has the right to any appreciation in the value of the index over the exercise price of the option on or before the expiration date. Because the exercise of an index option is settled in cash, sellers of index call options cannot provide in advance for their potential settlement obligations by acquiring and holding the underlying securities. An Underlying Fund will lose money if it is required to pay the purchaser of an index option the difference between the cash value of the index on which the option was written and the exercise price and such difference is greater than the premium received by the Underlying Fund for writing the option. The value of index options written by an Underlying Fund, which will be priced daily, will be affected by changes in the value and dividend rates of the underlying common stocks in the respective index, changes in the actual or perceived volatility of the stock market and the remaining time to the options' expiration. The value of the index options also may be adversely affected if the market for the index options becomes less liquid or smaller. Distributions paid by an Underlying Fund on its common shares may be derived in part from the net index option premiums it receives from selling index put and call options, less the cost of paying settlement amounts to purchasers of the options that exercise their options. Net index option premiums can vary widely over the short term and long term.

There are significant differences between the securities and options markets that could result in an imperfect correlation between these markets, causing a given transaction not to achieve its objectives.

Futures Contracts Risk. The use of futures contracts involves risks different from, or possibly greater than, the risks associated with investing directly in securities and other traditional investments and could cause a fund to lose more than the principal amount invested. Because futures require only a small initial investment in the form of a deposit or margin, they involve a high degree of leverage. Accordingly, the fluctuation of the value of futures in relation to the underlying assets upon which they are based is magnified. Thus, a fund may experience losses that exceed losses experienced by funds that do not use futures contracts. There may be imperfect correlation, or even no correlation, between price movements of a futures contract and price movements of investments for which futures are used as a substitute. Lack of correlation (or tracking) may be due to factors unrelated to the value of the investments being hedged, such as speculative or other pressures on the markets in which these instruments are traded. Consequently, the effectiveness of futures as a security substitute will depend, in part, on the degree of correlation between price movements in the futures and price movements in underlying securities. While futures contracts are generally liquid instruments, under certain market conditions they may become illiquid. Futures exchanges may impose daily or intra-day price change limits and/or limit the volume of trading. Additionally, government regulation may further reduce liquidity through similar trading restrictions. As a result, a fund may be unable to close out its futures contracts at a time which is advantageous. The successful use of futures depends upon a variety of factors, particularly the ability of the Sub-Adviser to predict movements of the underlying securities markets, which requires different skills than predicting changes in the prices of individual securities. There can be no assurance that any particular futures strategy adopted will succeed.

Options Risk. Options give the holder of the option the right to buy (or to sell) a position in a security or in a contract to the writer of the option, at a certain price. They are subject to correlation risk because there may be an imperfect correlation between the options and the securities markets

that cause a given transaction to fail to achieve its objectives. The successful use of options depends on the Sub-Adviser's ability to correctly predict future price fluctuations and the degree of correlation between the options and securities markets. Exchanges can limit the number of positions that can be held or controlled by the Fund or the Sub-Adviser, thus limiting the ability to implement the Fund's strategies. Options are also particularly subject to leverage risk and can be subject to liquidity risk.

Options on Swaps. An option on a swap agreement, or a "swaption," is a contract that gives a counterparty the right (but not the obligation) to enter into a new swap agreement or to shorten, extend, cancel or otherwise modify an existing swap agreement, at some designated future time on specified terms. In return, the purchaser pays a "premium" to the seller of the contract. The seller of the contract receives the premium and bears the risk of unfavorable changes on the underlying swap. The Fund may write (sell) and purchase put and call swaptions. The Fund may also enter into swaptions on either an asset-based or liability-based basis, depending on whether the Fund is hedging its assets or its liabilities. The Fund may write (sell) and purchase put and call swaptions to the same extent it may make use of standard options on securities or other instruments. Swaptions are generally subject to the same risks involved in the Fund's use of options.

Swap Agreement Risk. Swap agreements are generally traded in OTC markets and have only recently become subject to regulation by the CFTC. CFTC rules, however, do not cover all types of swap agreements. Investors, therefore, may not receive the protection of CFTC regulation or the statutory scheme of the Commodity Exchange Act in connection with a fund's swap agreements. The lack of regulation in these markets could expose investors to significant losses under certain circumstances, including in the event of trading abuses or financial failure by participants. Unlike in futures contracts, the counterparty to uncleared OTC swap agreements is generally a single bank or other financial institution, rather than a clearing organization backed by a group of financial institutions. As a result, a fund is subject to increased counterparty risk with respect to the amount it expects to receive from counterparties to uncleared swaps. If a counterparty becomes bankrupt or otherwise fails to perform its obligations due to financial difficulties, a fund could suffer significant losses on these contracts and the value of an investor's investment in the fund may decline. OTC swaps may be less liquid than futures contracts because they are not traded on an exchange, do not have uniform terms and conditions, and are generally entered into based upon the creditworthiness of the parties and the availability of credit support, such as collateral, and in general, are not transferable without the consent of the counterparty.

Total Return Swap Risk. A total return swap is a contract in which one party agrees to make periodic payments to another party based on the change in market value of the assets underlying the contract, which may include a specified security, basket of securities, or securities indices during the specified period, in return for periodic payments based on a fixed or variable interest rate or the total return from other underlying assets. Total return swap agreements may be used to obtain exposure to a security or market without owning or taking physical custody of such security or investing directly in such market. Total return swap agreements may effectively add leverage to a fund's portfolio because, in addition to its total net assets, the fund would be subject to investment exposure on the notional amount of the swap. The primary risks associated with total returns swaps are credit risks (if the counterparty fails to meet its obligations) and market risk (if there is no liquid market for the agreement or unfavorable changes occur to the underlying asset).

Dividend Risk: An issuer of a security may be unwilling or unable to pay income on a security. Common stocks do not assure dividend payments. Common stockholders have a right to receive dividends only after the company has provided for payment of its creditors, bondholders and preferred stockholders. Dividends

are paid only when declared by an issuer's board of directors, and the amount of any dividend may vary over time.

Equity Securities Risk: Common stock holds the lowest priority in the capital structure of a company, and therefore takes the largest share of the company's risk and its accompanying volatility. An adverse event, such as an unfavorable earnings report, may depress the value of a particular common stock. Also, prices of common stocks are sensitive to general market movements.

Foreign and Emerging Markets Securities Risk: Fluctuations in the value of the U.S. dollar relative to the values of other currencies may adversely affect investments in foreign and emerging market securities. Foreign and emerging market securities may have relatively low market liquidity, decreased publicly available information about issuers, and inconsistent and potentially less stringent accounting, auditing and financial reporting requirements and standards of practice comparable to those applicable to domestic issuers. Foreign and emerging market securities may be subject to the risks of expropriation, nationalization or other adverse political or economic developments and the difficulty of enforcing obligations in other countries. Investments in foreign and emerging market securities also may be subject to dividend withholding or confiscatory taxes, currency blockage and/or transfer restrictions. Emerging markets may be subject to greater market volatility, lower trading volume, political and economic instability, uncertainty regarding the existence of trading markets and more governmental limitations on foreign investment than more developed markets. In addition, securities in emerging markets may be subject to greater price fluctuations than securities in more developed markets. The Fund or an Underlying Fund's investment in securities of foreign companies may be in the form of depositary receipts or other securities convertible into securities of foreign issuers. Depositary receipts generally must be sponsored, but may be unsponsored. Sponsored depositary receipts are established jointly by a depositary and the underlying issuer, whereas unsponsored depositary receipts may be established by a depositary without participation by the underlying issuer. Holders of an unsponsored depositary receipt generally bear all the costs associated with establishing the unsponsored depositary receipt. In addition, the issuers of the securities underlying unsponsored depositary receipts are not obligated to disclose material information in the United States and, therefore, there may be less information available regarding such issuers and there may not be a correlation between such information and the market value of the depositary receipts. The regulatory framework pursuant to which foreign closed-end funds operate may not provide the same protections afforded by U.S. federal securities laws. In addition, where all or a portion of an ETF's portfolio holdings trade in markets that are closed when the market for the ETF is open, there may be valuation differences that could lead to differences between the ETF's market price and the value of the ETF's portfolio holdings.

Fund Distributions Risk: The Fund seeks to make cash distributions once per month throughout a calendar year based on a rate determined at the beginning of the year. Because these distributions will be made from Fund assets and shareholders are generally not expected to reinvest such distributions in additional Fund shares, the Fund's monthly cash distributions will reduce the amount of assets available for investment by the Fund. It is possible for the Fund to suffer substantial investment losses and simultaneously experience additional asset reductions as a result of its distributions to shareholders under this distribution policy. Moreover, even if the Fund's capital grows over short, intermediate, or long periods of time, it is possible that such growth will be insufficient to enable the Fund to maintain the amount of its cash distributions without returning capital to shareholders. A return of capital is a return of all or part of a shareholder's original investment in the Fund. In general, a return of capital is not immediately taxable to a shareholder. Rather, it reduces a shareholder's cost basis in Fund shares and is not taxable to a shareholder until his or her cost basis has been reduced to zero. The rate and dollar amount of the Fund's monthly income payments could vary substantially from one year to the next, during the course of a year, and over time depending on several factors, including the performance of the financial markets in which the Fund invests, the allocation of Fund assets across different asset classes and investments, the performance of the Fund's investment

strategies, and the amount and timing of prior distributions by the Fund. The Fund is not guaranteed to provide a fixed or stable level of cash distributions at any time or over any period of time.

Fund of Funds Risk: Because the Fund is a “fund of funds,” its investment performance largely depends on the investment performance of the Underlying Funds in which it invests. An investment in the Fund is subject to the risks associated with the Underlying Funds. The Fund will pay indirectly a proportional share of the fees and expenses of the Underlying Funds in which it invests, including their investment advisory and administration fees, in addition to its own fees and expenses. In addition, at times certain segments of the market represented by constituent Underlying Funds may be out of favor and underperform other segments.

Geographic Investment Risk: To the extent that the Fund invests a significant portion of its assets in the securities of companies of a single country or region, it is more likely to be impacted by events or conditions affecting that country or region. For example, political and economic conditions and changes in regulatory, tax, or economic policy in a country could significantly affect the market in that country and in surrounding or related countries and have a negative impact on the Fund’s performance. Currency developments or restrictions, political and social instability, and changing economic conditions have resulted in significant market volatility.

High Yield or Non-Investment Grade Securities Risk: High yield or non-investment grade securities (commonly referred to as “junk bonds”) and unrated securities of comparable credit quality are subject to the increased risk of an issuer’s inability to meet principal and interest payment obligations and are generally considered to be speculative. These securities may be subject to greater price volatility due to such factors as specific corporate developments, interest rate sensitivity, negative perceptions of the non-investment grade securities markets generally, real or perceived adverse economic and competitive industry conditions and less secondary market liquidity. If the issuer of non-investment grade securities defaults, an Underlying Fund may incur additional expenses to seek recovery.

Illiquid Securities Risk: No one can guarantee that a liquid trading market will exist for any security. The Underlying Funds may invest in restricted securities and other investments that may be illiquid. Illiquid securities are securities that are not readily marketable and may include some restricted securities, which are securities that may be unregistered or may be sold only in a privately negotiated transaction or pursuant to an exemption from registration. Illiquid investments involve the risk that the securities will not be able to be sold at the time desired by an Underlying Fund or at prices approximating the value at which the Underlying Fund is carrying the securities on its books.

Closed-end funds are not limited in their ability to invest in illiquid securities. Securities with reduced liquidity involve greater risk than securities with more liquid markets. Market quotations for securities not traded on national exchanges may vary over time, and if the credit quality of a fixed-income security unexpectedly declines, secondary trading of that security may decline for a period of time. In the event that an Underlying Fund voluntarily or involuntarily liquidates portfolio assets during periods of infrequent trading, it may not receive full value for those assets.

There may be limited trading in the shares of closed-end funds. This may make it more difficult to purchase or sell a large number of an Underlying Fund’s shares at any one time.

Inflation Risk: The value of assets or income from an investment will be worth less in the future as inflation decreases the value of money.

Inflation-Protected Securities Risk: Inflation-protected debt securities may react differently from other types of debt securities and tend to react to changes in “real” interest rates. Real interest rates represent

nominal (stated) interest rates reduced by the expected impact of inflation. In general, the price of an inflation-protected debt security can fall when real interest rates rise, and can rise when real interest rates fall. Interest payments on inflation-protected debt securities can be unpredictable and will vary as the principal and/or interest is adjusted for inflation. Also, the inflation index utilized by a particular inflation-protected security may not accurately reflect the true rate of inflation, in which case the market value of the security could be adversely affected.

Interest Rate Risk. Investments in fixed-income securities are subject to the possibility that interest rates could rise (or are expected to rise) sharply, causing the value of an Underlying Fund's holdings or its share price to decline. Longer term bonds and zero coupon bonds are generally more sensitive to interest rate changes than shorter-term bonds. Generally, the longer the average duration of the bonds in an Underlying Fund, the more the Underlying Fund's share price will fluctuate in response to interest rate changes. Duration is a measure used to determine the sensitivity of a security's price to changes in interest rates that incorporates a security's yield, coupon, final maturity and call features, among other characteristics. For example, the price of a bond fund with an average duration of eight years would be expected to fall approximately 8% if interest rates rose by one percentage point. Conversely, the price of a bond fund with an average duration of negative three years would be expected to rise approximately 3% if interest rates rose by one percentage point. However, duration may not accurately reflect the true interest rate sensitivity of instruments held by an Underlying Fund and, in turn, the Underlying Fund's susceptibility to changes in interest rates. If an issuer calls or redeems an investment during a time of declining interest rates, an Underlying Fund might have to reinvest the proceeds in an investment offering a lower yield, and therefore might not benefit from any increase in value as a result of declining interest rates.

Securities with floating interest rates, such as syndicated bank loans, generally are less sensitive to interest rate changes, but may decline in value if their interest rates do not rise as much or as fast as interest rates in general. In a decreasing interest rate environment, an Underlying Fund's investment in securities with floating interest rates may prevent the Underlying Fund from taking full advantage of decreasing interest rates in a timely manner. During periods of rising interest rates, issuers of debt securities or asset-backed securities may pay principal later or more slowly than expected, which may reduce the value of an Underlying Fund's investment in such securities and may prevent the Underlying Fund from receiving higher interest rates on proceeds reinvested.

Although the Board of Governors of the Federal Reserve System ("Federal Reserve") has started to raise interest rates, interest rates in the U.S. and many parts of the world, including certain European countries, remain at or near historically low levels. In addition, certain European countries have recently experienced (or currently are expected to experience) negative interest rates on certain fixed-income instruments, and similar interest rate conditions may be experienced in other regions. In the United States, rate increases are likely going to be very slow. To the extent the Federal Reserve continues to raise interest rates, there is a risk that rates across the financial system may rise. Very low or negative interest rates may magnify an Underlying Fund's susceptibility to interest rate risk and diminish yield and performance (e.g., during periods of very low or negative interest rates, an Underlying Fund may be unable to maintain positive returns).

Changes in fixed-income market conditions, including the recent increase and potential for future increases to the federal funds rate or interest rates falling below zero, may expose fixed-income markets to heightened volatility and reduced liquidity for certain Underlying Fund investments that may be difficult to sell at favorable prices to meet fund redemption obligations, causing the value of an Underlying Fund's investments and share price to decline. Very low or changing interest rates may also have unpredictable effects on securities markets in general, directly or indirectly impacting an Underlying Fund's investments,

yield and performance. Thus, Underlying Funds currently face a heightened level of interest rate, liquidity and valuation risks.

An Underlying Fund that invests in derivatives tied to fixed-income markets may be more substantially exposed to these risks than an Underlying Fund that does not invest in such derivatives. To the extent an Underlying Fund experiences high redemptions because of changes in interest rates, the Underlying Fund may experience increased portfolio turnover, which will increase the costs that the Underlying Fund incurs and may lower the Underlying Fund's performance. The liquidity levels of an Underlying Fund's portfolio may also be affected and the Underlying Fund could be required to sell holdings at disadvantageous times or prices in order to meet redemption obligations.

The Fund may seek to hedge interest rate risk through the use of short positions in U.S. Treasury securities or in ETFs that seek to track the performance of bond indices, or through the use of derivative instruments, but there can be no guarantee that such strategies will be successful. When interest rates fall, an unhedged investment in fixed-income securities will outperform a hedged investment in the same fixed-income securities. Furthermore, when interest rates remain unchanged, a hedged investment in fixed-income securities will underperform a long-only investment in the same fixed-income securities.

Issuer-Specific Risk: The value of an Underlying Fund may be more volatile than the market as a whole and may perform differently from the value of the market as a whole.

Leverage Risk: Leverage may result from ordinary borrowings, or may be inherent in the structure of certain of the Fund's investments such as derivatives. If the prices of those investments decrease, or if the cost of borrowing exceeds any increase in the prices of those investments, the net asset value of the Fund's Shares will decrease faster than if the Fund had not used leverage. To repay borrowings, the Fund may have to sell investments at a time and at a price that is unfavorable to the Fund. Interest on borrowings is an expense the Fund would not otherwise incur. Leverage magnifies the potential for gain and the risk of loss. If the Fund uses leverage, there can be no assurance that the Fund's leverage strategy will be successful.

The Underlying Funds in which the Fund may invest may be leveraged. As a result, the Fund may be exposed indirectly to leverage through investment in the Underlying Funds. An investment in securities of Underlying Funds that use leverage may expose the Fund to higher volatility in the market value of such securities and the possibility that the Fund's long-term returns on such securities (and, indirectly, the long-term returns of the Shares) will be diminished. The Underlying Funds may employ the use of leverage in their portfolios through the issuance of preferred shares, borrowing from banks or other methods. While this leverage often serves to increase yield, it also subjects an Underlying Fund to increased risks. These risks may include the likelihood of increased volatility and the possibility that an Underlying Fund's common stock income will fall if the dividend rate on the preferred shares or the interest rate on any borrowings rises. The use of leverage is premised upon the expectation that the cost of leverage will be lower than the return on the investments made with the proceeds. However, if the income or capital appreciation from the securities purchased with such proceeds is not sufficient to cover the cost of leverage or if the Underlying Fund incurs capital losses, the return to common stockholders, such as the Fund, will be less than if leverage had not been used. There can be no assurance that a leveraging strategy will be successful during any period in which it is employed.

Loans Risk: Loans are subject to the credit risk of nonpayment of principal or interest. Economic downturns or increases in interest rates may cause an increase in defaults, interest rate risk and liquidity risk. Loans may or may not be collateralized at the time of acquisition, and any collateral may be relatively illiquid or lose all or substantially all of its value subsequent to investment. In the event of bankruptcy of a borrower,

an Underlying Fund could experience delays or limitations with respect to its ability to realize the benefits of any collateral securing a loan.

An Underlying Fund may invest in certain commercial loans, including loans generally known as “syndicated bank loans,” by acquiring participations or assignments in such loans. The lack of a liquid secondary market for such securities may have an adverse impact on the value of the securities and an Underlying Fund’s ability to dispose of particular assignments or participations when necessary to meet redemptions of shares or to meet an Underlying Fund’s liquidity needs.

When purchasing a participation, an Underlying Fund may be subject to the credit risks of both the borrower and the lender that is selling the participation. When purchasing a loan assignment, an Underlying Fund acquires direct rights against the borrowers, but only to the extent of those held by the assigning lender. Investment in loans through a direct assignment from the financial institution’s interests with respect to a loan may involve additional risks to an Underlying Fund.

Junior loans, which have a lower place in the borrower’s capital structure than senior loans and may be unsecured, involve a higher degree of overall risk than senior loans of the same borrower. Second lien loans are secured by the assets of the issuer. In a typical structure, the claim on collateral and right of payment of second lien loans are junior to those of first-lien loans. Subordinated bridge loans are loans that are intended to provide short-term financing to provide a “bridge” to an asset sale, bond offering, stock offering, or divestiture. Generally, bridge loans are provided by arrangers as part of an overall financing package. Typically, the issuer will agree to increasing interest rates if the loan is not repaid as expected. A subordinated bridge loan is junior to a senior bridge loan in right of payment.

There may be no active trading market for loans. Loans may have settlement periods in excess of seven days. Failure to receive sales proceeds on a timely basis may constrain an Underlying Fund’s ability to meet its obligations (including obligations to redeeming shareholders).

Certain courts have determined that loans are not securities and, therefore, purchasers such as an Underlying Fund may not be entitled to the anti-fraud protections of the federal securities laws, including the prohibitions on insider trading.

Management Risk: The investment process the Sub-Adviser uses to select Underlying Funds and Underlying Fund Managers, which combines fundamental analysis, quantitative analysis, and proprietary screening tools, may not produce the intended results. In addition, there is no guarantee that the Sub-Adviser’s use of investment strategies, including the use of borrowing and derivatives, will produce the intended results.

Market Risk: An investment in the Fund involves risks similar to those of investing in any fund of equity securities, such as market fluctuations caused by such factors as economic and political developments, changes in interest rates and perceived trends in securities prices. The values of equity securities could decline generally or could underperform other investments. Different types of equity securities tend to go through cycles of out-performance and under-performance in comparison to the general securities markets. In addition, securities may decline in value due to factors affecting a specific issuer, market or securities markets generally.

Mortgage-Backed and Asset-Backed Securities Risk: Investments in mortgage- and asset-backed securities are subject to prepayment or call risk, which is the risk that payments from the borrower may be received

earlier than expected due to changes in the rate at which the underlying loans are prepaid. Securities may be prepaid at a price less than the original purchase value.

Mortgage-backed securities represent a participation interest in a pool of mortgage loans originated by governmental or private lenders such as banks. They differ from conventional debt securities, which provide for periodic payment of interest in fixed amounts and principal payments at maturity or on specified call dates. Mortgage pass-through securities provide for monthly payments that are a “pass-through” of the monthly interest and principal payments made by the individual borrowers on the pooled mortgage loans. Mortgage pass-through securities may be collateralized by mortgages with fixed rates of interest or adjustable rates. Mortgage-backed securities have different risk characteristics than traditional debt securities. Although generally the value of fixed-income securities increases during periods of falling interest rates and decreases during periods of rising rates, this is not always the case with mortgage-backed securities. This is due to the fact that principal on underlying mortgages may be prepaid at any time as well as other factors. Generally, prepayments will increase during a period of falling interest rates and decrease during a period of rising interest rates. The rate of prepayments also may be influenced by economic and other factors. Prepayment risk includes the possibility that, as interest rates fall, securities with stated interest rates may have the principal prepaid earlier than expected, requiring an Underlying Fund to invest the proceeds at generally lower interest rates. Certain mortgage-backed securities may be more volatile, less liquid and more difficult to value than other traditional types of debt securities.

Asset-backed securities have risk characteristics similar to mortgage-backed securities. Like mortgage-backed securities, they generally decrease in value as a result of interest rate increases, but may benefit less than other fixed-income securities from declining interest rates, principally because of prepayments. Also, as in the case of mortgage-backed securities, prepayments generally increase during a period of declining interest rates although other factors, such as changes in credit use and payment patterns, also may influence prepayment rates. Asset-backed securities also involve the risk that various federal and state consumer laws and other legal, regulatory and economic factors may result in the collateral backing the securities being insufficient to support payment on the securities. Certain asset-backed securities may be more volatile, less liquid and more difficult to value than other traditional types of debt securities.

Municipal Securities Risk: The Underlying Funds may invest in municipal securities. Municipal securities are subject to the risk that litigation, legislation or other political events, local business or economic conditions or the bankruptcy of the issuer could have a significant effect on an issuer’s ability to make payments of principal and/or interest. In addition, there is a risk that, as a result of the recent economic crisis, the ability of any issuer to pay, when due, the principal or interest on its municipal bonds may be materially affected.

Political changes and uncertainties in the municipal market related to taxation, legislative changes or the rights of municipal security holders can significantly affect municipal securities. Because many securities are issued to finance similar projects, especially those relating to education, health care, transportation and utilities, conditions in those sectors can affect the overall municipal market. In addition, changes in the financial condition of an individual municipal issuer can affect the overall municipal market. Municipal securities backed by current or anticipated revenues from a specific project or specific assets can be negatively affected by the discontinuance of the taxation supporting the project or assets or the inability to collect revenues for the project or from the assets. If the IRS determines that an issuer of a municipal security has not complied with applicable tax requirements, interest from the security could become taxable and the security could decline significantly in value.

The market for municipal bonds may be less liquid than for taxable bonds. There also may be less information available on the financial condition of issuers of municipal securities than for public corporations. This means that it may be harder to buy and sell municipal securities, especially on short

notice, and municipal securities may be more difficult for the Underlying Funds to value accurately than securities of public corporations. Since certain Underlying Funds may invest a significant portion of their portfolios in municipal securities, each such Underlying Fund's portfolio may have greater exposure to liquidity risk than funds that invest in non-municipal securities.

Operational Risk. Your ability to transact in Shares or the valuation of your investment may be negatively impacted because of the operational risks arising from factors such as processing errors and human errors, inadequate or failed internal or external processes, failures in systems and technology, changes in personnel, and errors caused by third party service providers or trading counterparties. Although the Fund attempts to minimize such failures through controls and oversight, it is not possible to identify all of the operational risks that may affect the Fund or to develop processes and controls that completely eliminate or mitigate the occurrence of such failures. The Fund and its shareholders could be negatively impacted as a result.

Preferred Securities Risk: Preferred securities are subordinated to bonds and other debt instruments in a company's capital structure and therefore will be subject to greater credit risk than those debt instruments. In addition, preferred securities are subject to other risks, such as having no or limited voting rights, being subject to special redemption rights, having distributions deferred or skipped, having limited liquidity, changing tax treatments and possibly being in heavily regulated industries. If the Fund owns a security that is deferring or omitting its distributions, the Fund may be required to report the distribution on its tax returns, even though it may not have received this income. Further, preferred securities may lose substantial value due to the omission or deferment of dividend payments. Preferred securities may be less liquid than many other securities, such as common stocks, and generally offer no voting rights with respect to the issuer. Preferred securities also may be subordinated to bonds or other debt instruments in an issuer's capital structure, subjecting them to a greater risk of non-payment than more senior securities. In addition, in certain circumstances, an issuer of preferred securities may redeem the securities prior to a specified date, which may negatively impact the return of the security.

REIT Risk: Adverse economic, business or political developments affecting real estate could have a major effect on the value of the Fund's investments in REITs. Investing in REITs may subject the Fund to risks associated with the direct ownership of real estate, such as decreases in real estate values, overbuilding, increased competition and other risks related to local or general economic conditions, increases in operating costs and property taxes, changes in zoning laws, casualty or condemnation losses, possible environmental liabilities, regulatory limitations on rent and fluctuations in rental income. Changes in interest rates may also affect the value of a Fund's investment in REITs. Certain REITs have a relatively small market capitalization, which may tend to increase the volatility of the market price of these securities. REITs are dependent upon specialized management skills, have limited diversification and are, therefore, subject to risks inherent in operating and financing a limited number of projects. REITs are also subject to heavy cash flow dependency and defaults by borrowers. In addition, REITs are subject to the possibility of failing to qualify for the favorable U.S. federal income tax treatment generally available to them under the Code and failing to maintain exemption from the registration requirements of the 1940 Act. Recently enacted tax legislation commonly referred to as the Tax Cuts and Jobs Act (the "Tax Act") treats "qualified REIT dividends" (i.e., ordinary REIT dividends other than capital gain dividends and portions of REIT dividends designated as qualified dividend income eligible for capital gain tax rates) as eligible for a 20% deduction by non-corporate taxpayers. This deduction, if allowed in full, equates to a maximum effective tax rate of 29.6% (37% top rate applied to income after 20% deduction). The Tax Act does not contain a provision permitting a regulated investment company, such as the Fund, to pass the special character of this income through to its shareholders. Currently, direct investors in REITs will enjoy the lower rate, but investors in regulated investment companies that invest in such REITs will not. It is uncertain whether future technical

corrections or administrative guidance will address this issue to enable the Fund to pass through the special character of “qualified REIT dividends” to shareholders.

Risk of Underlying Fund Market Price Discount from/Premium to Net Asset Value: The shares of the Underlying Funds may trade at a discount or premium to their NAV. Historically, shares of Underlying Funds have frequently traded at a discount to their NAV, which discounts have, on occasion, been substantial and lasted for sustained periods of time. This characteristic is a risk separate and distinct from the risk that an Underlying Fund’s NAV could decrease as a result of investment activities. Whether investors, such as the Fund, will realize gains or losses upon the sale of shares will depend not on the Underlying Funds’ NAVs, but entirely upon whether the market price of the Underlying Funds’ shares at the time of sale is above or below an investor’s purchase price for shares.

Shareholder Activism Risk: When pursuing an activist campaign with respect to an Underlying Fund, the Sub-Adviser may come into possession of material, non-public information about the Underlying Fund. In these circumstances and until such information becomes publicly available, the Fund may be prevented from transacting in Underlying Fund shares, which may adversely affect the Fund’s performance.

Short Selling Risk: Short selling involves selling securities, which may or may not be owned, and borrowing the same securities for delivery to the purchaser, with an obligation to replace the borrowed securities at a later date. Short selling allows an investor to seek profits from declines in the prices of securities. A short sale creates the risk of a theoretically unlimited loss because the price of the underlying security could theoretically increase without limit and increase the cost of buying those securities to close the short position. There can be no assurance that the securities necessary to close a short position will be available for purchase. Purchasing securities to close out the short position can itself cause the price of the securities to rise further, thereby exacerbating the loss. Short strategies can also be implemented synthetically through various instruments and be used with respect to indices or in the over-the-counter market and with respect to futures and other instruments. In some cases of synthetic short sales, there is no floating supply of an underlying instrument with which to cover or close out a short position and an Underlying Fund may be entirely dependent on the willingness of over-the-counter market makers to quote prices at which the synthetic short position may be unwound. There can be no assurance that such market makers will be willing to make such quotes. Short strategies can also be implemented on a leveraged basis. Lastly, even though an Underlying Fund generally secure a "good borrow" of the security sold short at the time of execution, the lending institution may recall the lent security at any time, thereby forcing such Underlying Fund to purchase the security at the then-prevailing market price, which may be higher.

Structured Instruments Risk: An Underlying Fund may invest in, or have exposure to, various types of structured instruments, including securities that have demand, tender or put features, or interest rate reset features. These may include instruments issued by structured investment or special purpose vehicles or conduits, and may be asset-backed or mortgage-backed securities. Structured instruments may take the form of participation interests or receipts in underlying securities or other assets, and in some cases are backed by a financial institution serving as a liquidity provider. Some of these instruments may have an interest rate swap feature which substitutes a floating or variable interest rate for the fixed interest rate on an underlying security, and some may be asset-backed or mortgage-backed securities. Structured instruments are a type of derivative instrument and the payment and credit qualities of these instruments derive from the assets embedded in the structure from which they are issued. For structured securities that have embedded leverage features, small changes in interest or prepayment rates may cause large and sudden price movements. Structured instruments are often subject to heightened liquidity risk. Structured

instruments may behave in ways not anticipated by the Underlying Funds, or they may not receive the tax, accounting or regulatory treatment anticipated by the Underlying Funds.

Trading Risk. Although the Shares of the Fund are listed for trading on a listing exchange, there can be no assurance that an active trading market for such Shares will develop or be maintained. Secondary market trading in the Shares may be halted by a listing exchange because of market conditions or for other reasons. In addition, trading in the Shares is subject to trading halts caused by extraordinary market volatility pursuant to “circuit breaker” rules. There can be no assurance that the requirements necessary to maintain the listing of the Shares will continue to be met or will remain unchanged.

Shares of the Fund may trade at, above or below their most recent NAV. The per share NAV of the Fund is calculated at the end of each business day and fluctuates with changes in the market value of the Fund’s holdings since the prior most recent calculation. The trading prices of the Fund’s Shares will fluctuate continuously throughout trading hours based on market supply and demand. The trading prices of the Fund’s Shares may deviate significantly from NAV during periods of market volatility. These factors, among others, may lead to the Fund’s Shares trading at a premium or discount to NAV. However, given that Shares can be created and redeemed only in Creation Units at NAV (unlike shares of many closed-end funds, which frequently trade at appreciable discounts from, and sometimes at premiums to, their NAVs), the Adviser does not believe that large discounts or premiums to NAV will exist for extended periods of time. While the creation/redemption feature is designed to make it likely that the Fund’s Shares normally will trade close to its NAV, exchange prices are not expected to correlate exactly with NAV due to timing reasons as well as market supply and demand factors. In addition, disruptions to creations and redemptions or the existence of extreme volatility may result in trading prices that differ significantly from NAV. If a shareholder purchases at a time when the market price of the Fund is at a premium to its NAV or sells at a time when the market price is at a discount to the NAV, the shareholder may sustain losses.

Investors buying or selling Shares in the secondary market will pay brokerage commissions or other charges imposed by brokers as determined by that broker. Brokerage commissions are often a fixed amount and may be a significant proportional cost for investors seeking to buy or sell relatively small amounts of Shares. In addition, secondary market investors will also incur the cost of the difference between the price that an investor is willing to pay for Shares (the “bid” price) and the price at which an investor is willing to sell Shares (the “ask” price). This difference in bid and ask prices is often referred to as the “spread” or “bid/ask spread.” The bid/ask spread varies over time for Shares based on trading volume and market liquidity, and is generally lower if the Fund’s Shares have more trading volume and market liquidity and higher if the Fund’s Shares have little trading volume and market liquidity. Further, increased market volatility may cause increased bid/ask spreads. Due to the costs of buying or selling Shares, including bid/ask spreads, frequent trading of Shares may significantly reduce investment results and an investment in Shares may not be advisable for investors who anticipate regularly making small investments.

Portfolio Holdings

As an actively-managed ETF, the Fund’s full portfolio holdings are made available daily on the Fund’s website. A description of the Fund’s policies and procedures with respect to the disclosure of the Fund’s portfolio securities is available in the Fund’s Statement of Additional Information (“SAI”).

Fund Management

Adviser. Exchange Traded Concepts, LLC, or the Adviser, an Oklahoma limited liability company, is located at 10900 Hefner Pointe Drive, Suite 207, Oklahoma City, Oklahoma 73120. The Adviser was formed in 2009 and provides investment advisory services to other exchange-traded funds. The Adviser serves as investment adviser to the Fund and provides investment advice to the Fund primarily in the form

of oversight of the Sub-Adviser, including daily monitoring of the purchase and sale of securities by the Sub-Adviser and regular review of the Sub-Adviser's performance. The Adviser also arranges for transfer agency, custody, fund administration and accounting, and other non-distribution related services necessary for the Fund to operate. The Adviser administers the Fund's business affairs, provides office facilities and equipment and certain clerical, bookkeeping and administrative services, and provides its officers and employees to serve as officers or Trustees of the Trust. For the services it provides to the Fund, the Fund pays the Adviser a fee, which is calculated daily and paid monthly, at an annual rate of 1.10% on the average daily net assets of the Fund.

Under the investment advisory agreement, the Adviser has agreed to pay all expenses incurred by the Fund except for the advisory fee, interest, taxes, brokerage commissions and other expenses incurred in placing orders for the purchase and sale of securities and other investment instruments, acquired fund fees and expenses, extraordinary expenses, and distribution fees and expenses paid by the Trust under any distribution plan adopted pursuant to Rule 12b-1 under the 1940 Act ("Excluded Expenses").

Pursuant to a Securities and Exchange Commission ("SEC") exemptive order and subject to the conditions of that order, the Adviser may, with Board approval but without shareholder approval, change or select new sub-advisers, materially amend the terms of an agreement with a sub-adviser (including an increase in its fee), or continue the employment of a sub-adviser after an event that would otherwise cause the automatic termination of services. Shareholders will be notified of any sub-adviser changes.

Sub-Adviser. Saba Capital Management, L.P., or the Sub-Adviser, is a Delaware limited partnership and commenced operations in 2009. It became a registered investment adviser with the SEC on August 6, 2010 and became a registered commodity pool operator with the National Futures Association on January 7, 2013. The Sub-Adviser is responsible for making day-to-day investment decisions for the Fund and trading portfolio securities and other investment instruments on behalf of the Fund, including selecting broker-dealers to execute purchase and sale transactions. Under a sub-advisory agreement, the Adviser pays the Sub-Adviser a fee, calculated daily and paid monthly, at an annual rate as follows: 1.01% on up to \$500 million in assets; 1.02% on the next \$500 million; 1.04% on amounts over \$1 billion.

Under the sub-advisory agreement, the Sub-Adviser agrees to sub-license the use of the Sub-Adviser's name to the Adviser and assumes the obligation of the Adviser to pay all expenses of the Fund, except the Excluded Expenses. Prior to the Fund's inception, the Sub-Adviser collaborated with the Adviser on the development of an investment program for the Fund.

A discussion regarding the basis for the Board's approval of the Investment Advisory Agreement with the Adviser and the Sub-Advisory Agreement with the Sub-Adviser is available in the Fund's Semi-Annual Report to Shareholders dated May 31, 2017.

Portfolio Managers

Boaz Weinstein and Pierre Weinstein are the Fund's portfolio managers and are jointly responsible for the day-to-day management of the Fund. The portfolio managers are responsible for various functions related to portfolio management, including, but not limited to, investing cash inflows, implementing investment strategy, researching and reviewing investment strategy, and overseeing members of their portfolio management team with more limited responsibilities.

Boaz Weinstein is the Founder and Chief Investment Officer of the Sub-Adviser. Previously, Mr. Weinstein worked at Deutsche Bank for 11 years, the last eight as Managing Director. In 2008, Mr. Weinstein became the Co-Head of Global Credit Trading of Deutsche Bank. Mr. Weinstein was also a member of the Global

Markets Executive Committee. Mr. Weinstein began his investment career in 1995 at Merrill Lynch, and worked at Donaldson Lufkin & Jenrette prior to joining Deutsche Bank.

Pierre Weinstein is a Partner and portfolio manager of the Sub-Adviser. Mr. Weinstein joined the Sub-Adviser at launch in April 2009. Previously, Mr. Weinstein was a Portfolio Manager at Saba Principal Strategies, the proprietary credit trading group at Deutsche Bank since January 2005, where he managed the equity derivatives and international convertible bond strategies. Mr. Weinstein started his investment career at Societe Generale in Paris in 1998 as an equity derivatives market maker and had various roles until 2004 including a position as a convertible bond proprietary trader in New York.

The SAI provides additional information about the Portfolio Managers' compensation, other accounts managed, and ownership of Fund shares.

Buying and Selling Fund Shares

Shares are listed for trading on the Exchange. When you buy or sell Shares on the secondary market, you will pay or receive the market price. You may incur customary brokerage commissions and charges and may pay some or all of the spread between the bid and the offered price in the secondary market on each leg of a round trip (purchase and sale) transaction. The Shares will trade on the Exchange at prices that may differ to varying degrees from the daily NAV of the Shares. A "Business Day" with respect to the Fund is any day on which the Exchange is open for business. The Exchange is generally open Monday through Friday and is closed weekends and the following holidays: New Year's Day, Martin Luther King, Jr. Day, Presidents' Day, Good Friday, Memorial Day, Independence Day, Labor Day, Thanksgiving Day and Christmas Day.

NAV per share for the Fund is computed by dividing the value of the net assets of the Fund (*i.e.* the value of its total assets less total liabilities) by its total number of Shares outstanding. Expenses and fees, including management and distribution fees, if any, are accrued daily and taken into account for purposes of determining NAV. NAV is determined each business day, normally as of the close of regular trading of the New York Stock Exchange (ordinarily 4:00 p.m., Eastern time).

The Exchange (or market data vendors or other information providers) will disseminate, every fifteen seconds during the regular trading day, an intraday value of Shares of the Fund, also known as the "intraday indicative value," or IIV. The IIV calculations are estimates of the value of the Fund's NAV per Share and are based on the current market value of the securities and/or cash required to be deposited in exchange for a Creation Unit. Premiums and discounts between the IIV and the market price may occur. The IIV does not necessarily reflect the precise composition of the current portfolio of securities held by the Fund at a particular point in time or the best possible valuation of the current portfolio. Therefore, it should not be viewed as a "real-time" update of the NAV per share of the Fund, which is calculated only once a day. The quotations of certain holdings of the Fund may not be updated during U.S. trading hours if such holdings do not trade in the United States. Neither the Fund, the Adviser, the Sub-Adviser or any of their affiliates are involved in, or responsible for, the calculation or dissemination of such IIVs and make no warranty as to their accuracy.

When determining NAV, the value of the Fund's portfolio securities is based on market prices of the securities, which generally means a valuation obtained from an exchange or other market (or based on a price quotation or other equivalent indication of the value supplied by an exchange or other market) or a valuation obtained from an independent pricing service. If a security's market price is not readily available or does not otherwise accurately reflect the fair value of the security, the security will be valued by another method that the Board believes will better reflect fair value in accordance with the Trust's valuation policies and procedures. Fair value pricing may be used in a variety of circumstances, including but not limited to,

situations when the value of a security in the Fund's portfolio has been materially affected by events occurring after the close of the market on which the security is principally traded but prior to the close of the Exchange (such as in the case of a corporate action or other news that may materially affect the price of a security) or trading in a security has been suspended or halted. Accordingly, the Fund's NAV may reflect certain portfolio securities' fair values rather than their market prices. Fair value pricing involves subjective judgments and it is possible that a fair value determination for a security will materially differ from the value that could be realized upon the sale of the security.

Frequent Purchases and Redemptions of Fund Shares

The Fund does not impose any restrictions on the frequency of purchases and redemptions of Creation Units; however, the Fund reserves the right to reject or limit purchases at any time as described in the SAI. When considering that no restriction or policy was necessary, the Board evaluated the risks posed by arbitrage and market timing activities, such as whether frequent purchases and redemptions would interfere with the efficient implementation of the Fund's investment strategy, or whether they would cause the Fund to experience increased transaction costs. The Board considered that, unlike traditional mutual funds, Shares are issued and redeemed only in large quantities of Shares known as Creation Units available only from the Fund directly to a few institutional investors ("Authorized Participants"), and that most trading in the Fund occurs on the Exchange at prevailing market prices and does not involve the Fund directly. Given this structure, the Board determined that it is unlikely that trading due to arbitrage opportunities or market timing by shareholders would result in negative impact to the Fund or its shareholders. In addition, frequent trading of Shares done by Authorized Participants and arbitrageurs is critical to ensuring that the market price remains at or close to NAV.

Distribution and Service Plan

The Fund has adopted a Distribution and Service Plan in accordance with Rule 12b-1 under the 1940 Act pursuant to which payments of up to 0.25% of the Fund's average daily net assets may be made for the sale and distribution of its Fund Shares. No payments pursuant to the Distribution and Service Plan will be made during the twelve (12) month period from the date of this Prospectus. Thereafter, 12b-1 fees may only be imposed after approval by the Board. Any forgone 12b-1 fees during this twelve month period will not be recoverable during any subsequent period. Because these fees, if imposed, would be paid out of the Fund's assets on an on-going basis, if payments are made in the future, these fees will increase the cost of your investment and may cost you more than paying other types of sales charges.

Dividends, Distributions and Taxes

Fund Distributions

The Fund pays out dividends from its net investment income, if any, monthly and distributes its net capital gains, if any, to investors at least annually. In so doing, the Fund seeks to make cash distributions once per month throughout a calendar year based on a rate determined at the beginning of the year. This rate is based on the Sub-Adviser's annual projection of income and forecast of interest rates for the upcoming year. Thus, the rate will vary from year to year. Further, the rate may be adjusted at any time during a given year. The Sub-Adviser monitors the Fund's distributions, the expected cash flow from investments and other metrics in determining whether to adjust the distribution rate during the course of a year. A portion of the distributions made by the Fund may be treated as return of capital for tax purposes. Shareholders who receive a payment of a distribution consisting of a return of capital may be under the impression that they are receiving net profits when, in fact, they are not. Shareholders should not assume that the source of a distribution from the Fund is net profit. One or more additional distributions may be made generally in

December or after the Fund's fiscal year-end to comply with applicable law. The Fund will declare and pay capital gain distributions in cash. Distributions in cash may be reinvested automatically in additional Shares only if the broker through whom you purchased Shares makes such option available. Your broker is responsible for distributing the income and capital gain distributions to you.

Dividend Reinvestment Service

Brokers may make available to their customers who own Shares the Depository Trust Company book-entry dividend reinvestment service. If this service is available and used, dividend distributions of both income and capital gains will automatically be reinvested in additional whole Shares of the Fund purchased on the secondary market. Without this service, investors would receive their distributions in cash. To determine whether the dividend reinvestment service is available and whether there is a commission or other charge for using this service, consult your broker. Brokers may require the Fund's shareholders to adhere to specific procedures and timetables.

Tax Information

The following is a summary of some important tax issues that affect the Fund and its shareholders. The summary is based on current tax laws, which may be changed by legislative, judicial or administrative action. You should not consider this summary to be a comprehensive explanation of the tax treatment of the Fund, or the tax consequences of an investment in the Fund. More information about taxes is located in the SAI.

The Tax Act makes significant changes to the U.S. federal income tax rules for taxation of individuals and corporations, generally effective for taxable years beginning after December 31, 2017. Many of the changes applicable to individuals are temporary and would apply only to taxable years beginning after December 31, 2017 and before January 1, 2026. There are only minor changes with respect to the specific rules only applicable to a regulated investment company, such as the Fund. The Tax Act, however, makes numerous other changes to the tax rules that may affect shareholders and the Fund. You are urged to consult with your own tax advisor regarding how the Tax Act affects your investment in the Fund.

You are urged to consult your tax adviser regarding specific questions as to federal, state and local income taxes.

Tax Status of the Fund

The Fund intends to qualify for the special tax treatment afforded to regulated investment companies under the Code. If the Fund maintains its qualification as a regulated investment company and meets certain minimum distribution requirements, then the Fund is generally not subject to federal income tax at the fund level on income and gains from investments that are timely distributed to shareholders. However, failure by the Fund to qualify as a regulated investment company or to meet minimum distribution requirements would result (if certain relief provisions were not available) in fund-level taxation and consequently a reduction in income available for distribution to shareholders.

Unless you are a tax-exempt entity or your investment in Fund Shares is made through a tax-deferred retirement account, such as an individual retirement account, you need to be aware of the possible tax

consequences when the Fund makes distributions, you sell Fund Shares and you purchase or redeem Creation Units (institutional investors only).

Tax Status of Distributions

- The Fund intends to distribute for each year substantially all of its net investment income and net capital gains income.
- Dividends and distributions are generally taxable to you whether you receive them in cash or reinvest them in additional Shares.
- The income dividends you receive from the Fund will be taxed as either ordinary income or “qualified dividend income.”
- Dividends that are reported by the Fund as qualified dividend income are generally taxable to non-corporate shareholders at tax rates of up to 20% (lower rates apply to individuals in lower tax brackets). The Fund expects to receive “qualified dividend income” from its investments in certain Underlying Funds taxed as regulated investment companies. Such Underlying Funds will generally report their distributions to the Fund as qualified dividend income if they receive dividends paid by U.S. corporations or certain foreign corporations that are either incorporated in a U.S. possession or eligible for tax benefits under certain U.S. income tax treaties. In addition, dividends that an Underlying Fund receives in respect of stock of certain foreign corporations may be qualified dividend income if that stock is readily tradable on an established U.S. securities market. For dividends to be taxed as qualified dividend income to a non-corporate shareholder, the Fund must satisfy certain holding period requirements with respect to the underlying stock or Underlying Fund and the non-corporate shareholder must satisfy holding period requirements with respect to his or her ownership of the Fund’s shares. Holding periods may be suspended for these purposes for stock that is hedged. The Fund’s investment in certain derivatives may significantly limit its ability to distribute dividends eligible to be treated as qualified dividend income.
- Distributions from the Fund’s short-term capital gains are generally taxable as ordinary income. Distributions from the Fund’s net capital gain (the excess of the Fund’s net long-term capital gains over its net short-term capital losses) are taxable as long-term capital gains regardless of how long you have owned your Shares. For non-corporate shareholders, long-term capital gains are generally taxable at tax rates of up to 20% (lower rates apply to individuals in lower tax brackets).
- The Underlying Funds in which the Fund invests may make return of capital distributions to the Fund, which in turn may cause shareholders to receive distributions from the Fund that would generally be treated as a return of capital for tax purposes. This may occur if the Fund makes total distributions during a given calendar year in an amount that exceeds the Fund’s net investment income and net capital gain for that calendar year; the excess would generally be treated by shareholders as a return of capital for tax purposes. A return of capital reduces a shareholder’s tax basis in its Fund Shares, which could result in higher taxes when the shareholder sells his or her Shares. This may cause the shareholder to pay taxes even if he or she sells Shares for less than the original price.
- U.S. individuals with income exceeding \$200,000 (\$250,000 if married and filing jointly) are subject to a 3.8% Medicare contribution tax on all or a portion of their “net investment income,” which includes interest, dividends, and certain capital gains (including certain capital gain distributions and capital gains realized on the sale of Shares of the Fund). This 3.8% tax also

applies to all or a portion of the undistributed net investment income of certain shareholders that are estates and trusts.

- Corporate shareholders may be entitled to a dividends-received deduction for the portion of dividends they receive from the Fund that are attributable to dividends received by the Fund from U.S. corporations, subject to certain limitations.
- Distributions paid in January but declared by the Fund in October, November or December of the previous year payable to shareholders of record in such a month may be taxable to you in the previous year.
- You should note that if you purchase Shares just before a distribution, the purchase price would reflect the amount of the upcoming distribution. In this case, you would be taxed on the entire amount of the distribution received, even though, as an economic matter, the distribution simply constitutes a return of your investment. This is known as “buying a dividend” and should be avoided by taxable investors.
- The Fund (or your broker) will inform you of the amount of your ordinary income dividends, qualified dividend income, and net capital gain distributions shortly after the close of each calendar year.
- To the extent the Fund invests in foreign securities, it may be subject to foreign withholding taxes with respect to dividends or interest the Fund received from sources in foreign countries. If more than 50% of the total assets of the Fund consist of foreign securities, the Fund will be eligible to elect to treat some of those taxes as a distribution to shareholders, which would allow shareholders to offset some of their U.S. federal income tax. The Fund (or your broker) will notify you if it makes such an election and provide you with the information necessary to reflect foreign taxes paid on your income tax return. Foreign tax credits, if any, received by the Fund as a result of an investment in an Underlying Fund taxable as a regulated investment company will not be passed through to you unless the Fund qualifies as a “qualified fund-of-funds” under the Code. If the Fund is a “qualified fund-of-funds” it will be eligible to file an election with the Internal Revenue Service that will enable the Fund to pass along these foreign tax credits to its shareholders. The Fund will be treated as a “qualified fund-of-funds” under the Code if at least 50% of the value of the Fund’s total assets (at the close of each quarter of the Fund’s taxable year) is represented by interests in other regulated investment companies.

Tax Status of Share Transactions. Each sale of Fund Shares or redemption of Creation Units will generally be a taxable event. Any capital gain or loss realized upon a sale of Fund Shares is generally treated as a long-term gain or loss if the Shares have been held for more than twelve months. Any capital gain or loss realized upon a sale of Fund Shares held for twelve months or less is generally treated as short-term gain or loss. Any capital loss on the sale of Shares held for six months or less is treated as long-term capital loss to the extent distributions of net capital gain were paid (or treated as paid) with respect to such Shares. Any loss realized on a sale will be disallowed to the extent Shares of the Fund are acquired, including through reinvestment of dividends, within a 61-day period beginning 30 days before and ending 30 days after the sale of Fund Shares.

A person who exchanges securities for Creation Units generally will recognize gain or loss from the exchange. The gain or loss will be equal to the difference between the market value of the Creation Units at the time of the exchange and the exchanger’s aggregate basis in the securities surrendered plus any cash paid for the Creation Units. A person who exchanges Creation Units for securities will generally recognize

a gain or loss equal to the difference between the exchanger's basis in the Creation Units and the aggregate market value of the securities and the amount of cash received. The Internal Revenue Service, however, may assert that a loss that is realized upon an exchange of securities for Creation Units may not be currently deducted under the rules governing "wash sales" (for a person who does not mark-to-market their holdings) or on the basis that there has been no significant change in economic position.

The Fund has the right to reject an order for a purchase of Shares of the Fund if the purchaser (or group of purchasers) would, upon obtaining the Shares so ordered, own 80% or more of the outstanding Shares of the Fund and if, pursuant to Section 351 of the Code, the Fund would have a basis in the securities different from the market value of such securities on the date of deposit.

Non-U.S. Investors. If you are a nonresident alien individual or a foreign corporation, trust or estate, (i) the Fund's ordinary income dividends will generally be subject to a 30% U.S. withholding tax, unless a lower treaty rate applies or unless such income is effectively connected with a U.S. trade or business, but (ii) gains from the sale or other disposition of Shares of the Fund generally are not subject to U.S. taxation, unless you are a nonresident alien individual who is physically present in the U.S. for 183 days or more per year. The Fund may, under certain circumstances, report all or a portion of a dividend as an "interest-related dividend" or a "short-term capital gain dividend," which would generally be exempt from this 30% U.S. withholding tax, provided certain other requirements are met. Different tax consequences may result if you are a foreign shareholder engaged in a trade or business within the United States or if you are a foreign shareholder entitled to claim the benefits of a tax treaty.

Backup Withholding. The Fund (or financial intermediaries, such as brokers, through which shareholders own Fund Shares) generally is required to withhold and to remit to the U.S. Treasury a percentage of the taxable distributions and the sale or redemption proceeds paid to any shareholder who fails to properly furnish a correct taxpayer identification number, who has under-reported dividend or interest income, or who fails to certify that he, she or it is not subject to such withholding.

The foregoing discussion summarizes some of the consequences under current federal tax law of an investment in the Fund. It is not a substitute for personal tax advice. Consult your personal tax advisor about the potential tax consequences of an investment in the Fund under all applicable tax laws.

Additional Information

Investments by Other Registered Investment Companies

For purposes of the 1940 Act, the Fund is treated as a registered investment company. Section 12(d)(1) of the 1940 Act restricts investments by investment companies in the securities of other investment companies, including Shares of the Fund. The SEC has issued an exemptive order on which the Trust relies permitting registered investment companies to invest in exchange-traded funds offered by the Trust, including the Fund, beyond the limits of Section 12(d)(1) subject to certain terms and conditions, including that such registered investment companies enter into an agreement with the Trust. However, so long as the Fund intends to invest in securities of other investment companies beyond the limits set forth in Section 12(d)(1)(A), registered investment companies are not permitted to rely on the exemptive relief.

Continuous Offering

The method by which Creation Units are purchased and traded may raise certain issues under applicable securities laws. Because new Creation Units are issued and sold by the Fund on an ongoing basis, at any point a "distribution," as such term is used in the Securities Act of 1933, as amended (the "Securities Act"), may occur. Broker-dealers and other persons are cautioned that some activities on their part may, depending

on the circumstances, result in their being deemed participants in a distribution in a manner which could render them statutory underwriters and subject them to the Prospectus delivery and liability provisions of the Securities Act.

For example, a broker-dealer firm or its client may be deemed a statutory underwriter if it takes Creation Units after placing an order with the transfer agent, breaks them down into individual Shares, and sells such Shares directly to customers, or if it chooses to couple the creation of a supply of new Shares with an active selling effort involving solicitation of secondary market demand for Shares. A determination of whether one is an underwriter for purposes of the Securities Act must take into account all the facts and circumstances pertaining to the activities of the broker-dealer or its client in the particular case, and the examples mentioned above should not be considered a complete description of all the activities that could lead to categorization as an underwriter.

Broker-dealer firms should also note that dealers who are not “underwriters” but are effecting transactions in Shares, whether or not participating in the distribution of Shares, are generally required to deliver a prospectus. This is because the prospectus delivery exemption in Section 4(a)(3) of the Securities Act is not available with respect to such transactions as a result of Section 24(d) of the 1940 Act. As a result, broker dealer-firms should note that dealers who are not underwriters but are participating in a distribution (as contrasted with ordinary secondary market transactions) and thus dealing with Shares that are part of an over-allotment within the meaning of Section 4(a)(3)(a) of the Securities Act would be unable to take advantage of the prospectus delivery exemption provided by Section 4(a)(3) of the Securities Act. Firms that incur a prospectus delivery obligation with respect to Shares of the Fund are reminded that under Rule 153 of the Securities Act, a prospectus delivery obligation under Section 5(b)(2) of the Securities Act owed to an exchange member in connection with a sale on the Exchange is satisfied by the fact that such Fund’s Prospectus is available on the SEC’s electronic filing system. The prospectus delivery mechanism provided in Rule 153 is only available with respect to transactions on an exchange.

Premium/Discount Information

The table below shows the number of days the market price of the Fund’s Shares was greater than the Fund’s NAV and the number of days it was less than the Fund’s NAV (i.e., premium or discount) during the fiscal period. Shareholders may pay more than the NAV when they buy Fund Shares and receive less than NAV when they sell those Shares, because Shares are bought and sold at current market prices. The data presented below represents past performance and cannot be used to predict future results.

Saba Closed-End Funds ETF

Financial Highlights

The financial highlights table is intended to help you understand the Fund's financial performance since the Fund commenced operations. Certain information reflects financial results for a single Fund share. The total returns in the table represent the rate that an investor would have earned or lost, on an investment in the Fund (assuming reinvestment of all dividends and distributions). This information has been derived from the financial statements audited by Cohen & Company, Ltd., the Fund's Independent Registered Public Accounting Firm, whose report, along with the Fund's financial statements, are included in the Fund's Annual Report, which is available upon request.

Financial Highlights – Saba Closed-End Funds ETF

Selected data for a share of beneficial interest outstanding throughout the period indicated.

		<i>Investment Activities</i>			<i>Distribution to Shareholders From</i>					<i>Ratios to Average Net Assets</i>		<i>Supplemental Data</i>		
<i>Net Asset Value, Beginning of Period</i>	<i>Net Investment Income⁽¹⁾</i>	<i>Net Realized and Unrealized Gain (Loss) on Investments</i>	<i>Total from Investment Activities</i>	<i>Net Investment Income</i>	<i>Net Realized Gains from Investments</i>	<i>Total Distributions</i>	<i>Net Asset Value, End of Period</i>	<i>Total Return⁽²⁾⁽³⁾</i>	<i>Total Return at Market⁽²⁾⁽⁴⁾</i>	<i>Ratio of Expenses to Average Net Assets⁽⁵⁾⁽⁹⁾</i>	<i>Ratio of Net Investment Income to Average Net Assets⁽⁵⁾⁽⁹⁾</i>	<i>Net Assets at End of Period (000's)</i>	<i>Portfolio Turnover⁽²⁾⁽⁷⁾</i>	
Saba Closed-End Funds ETF														
<i>For the Period March 20, 2017⁽⁶⁾ through November 30, 2017</i>	\$19.97	\$0.56	\$1.76	\$2.32	\$(0.66)	\$(0.45)	\$(1.11)	\$21.18	11.84%	12.15%	1.60% ⁽⁸⁾	3.77%	\$21,185	83%

⁽¹⁾ Per share numbers have been calculated using the average shares method.

⁽²⁾ Not annualized for periods less than one year.

⁽³⁾ Net asset value total return is calculated assuming an initial investment made at the net asset value at the beginning of the period, reinvestment of all dividends and distributions at net asset value during the period, if any, and redemption on the last day of the period at net asset value. This percentage is not an indication of the performance of a shareholder's investment in the Fund based on market value due to the differences between the market price of the shares and the net asset value per share of the Fund.

⁽⁴⁾ Market value total return is calculated assuming an initial investment made at market value at the beginning of the period, reinvestment of all dividends and distributions at net asset value during the period, if any, and redemption on the last day of the period at market value. Market value is determined by the composite closing price. Composite closing security price is defined as the last reported sale price on the Cboe BZX Exchange. The composite closing price is the last reported sale, regardless of volume, and not an average price, and may have occurred on a date prior to the close of the reporting period. Market value may be greater or less than net asset value, depending on the Fund's closing price on the Cboe BZX Exchange.

⁽⁵⁾ Annualized for periods less than one year.

⁽⁶⁾ Commencement of operations.

⁽⁷⁾ Excludes the impact of in-kind transactions related to the processing of capital share transactions in Creation Units.

⁽⁸⁾ Interest expense as a percent of average net assets and the ratio of expenses to average net assets excluding interest expense, are presented in the chart below:

	<i>Interest Expense as a Percent of Net Assets</i>	<i>Ratio of Expenses to Average Net Assets Excluding Interest Expense</i>
<i>For the Period March 20, 2017⁽⁶⁾ through November 30, 2017</i>	0.50%	1.10%

⁽⁹⁾ These ratios exclude the impact of expenses of the underlying closed-end investment companies holdings as represented in the Schedule of Investments. Recognition of net investment income by the Fund is affected by the timing of the declaration of dividends by the underlying closed-end investment companies in which the Fund invests.

Exchange Listed Funds Trust

Oklahoma City, Oklahoma 73120

ANNUAL/SEMI-ANNUAL REPORTS TO SHAREHOLDERS

These reports contain information about the Fund's investment strategies, recent market conditions and trends and their impact on Fund performance. The reports also contain more information about the Fund's holdings and detailed financial information about the Fund.

STATEMENT OF ADDITIONAL INFORMATION (SAI)

The SAI provides more detailed information about the Fund. The SAI is incorporated by reference into, and is thus legally a part of, this Prospectus.

HOUSEHOLDING

Householding is an option available to certain Fund investors. Householding is a method of delivery, based on the preference of the individual investor, in which a single copy of certain shareholder documents can be delivered to investors who share the same address, even if their accounts are registered under different names. Please contact your broker-dealer if you are interested in enrolling in householding and receiving a single copy of prospectuses and other shareholder documents, or if you are currently enrolled in householding and wish to change your householding status.

HOW TO OBTAIN MORE INFORMATION ABOUT THE FUND

To request a free copy of the latest annual or semi-annual report (when available), the SAI, or to request additional information about the Fund or to make other inquiries, please contact us as follows:

Call:	1-212-542-4644 Monday through Friday 8:30 a.m. to 6:30 p.m. (Eastern Time)	Write:	Exchange Listed Funds Trust 10900 Hefner Pointe Drive, Suite 207 Oklahoma City, Oklahoma 73120
Visit:	www.sbaetf.com		

The SAI and other information are also available from a financial intermediary (such as a broker-dealer or bank) through which the Fund's shares may be purchased or sold.

INFORMATION PROVIDED BY THE SECURITIES AND EXCHANGE COMMISSION

You can review and copy information about the Fund (including the SAI) at the SEC's Public Reference Room in Washington, DC. To find out more about this public service, call the SEC at 1-202-551-8090. Reports and other information about the Fund are also available in the EDGAR Database on the SEC's Internet site at <http://www.sec.gov>, or you can receive copies of this information, after paying a duplicating fee, by electronic request at the following e-mail address: publicinfo@sec.gov, or by writing the Public Reference Section, Securities and Exchange Commission, 100 F Street, N.E., Washington, DC 20549-0102.
